Green Procurement

Nitto Kohki has made every effort in developing "Environmental Improvement Plans" through the implementation of ISO14001, to execute environmentally conscious business activities on a company-wide basis. As a part of our ongoing commitment to the environment, we are also committed to reduce and/or exclude restricted substances from our products as designated by RoHS directives, laws and regulations of chemical substances.

LINEAR MOTOR

DRIVEN FREE PISTON

The Linear-motor-driven Free Piston will contribute to future product designs but also reduce system size and weight. Compact, quiet, and reliable operation make the Linear-motor-driven Free Piston Pump will enhance your system performance and extend its operating life.

Performance Specifications and Suggested Control Limits

The numeric data suggested in performance charts and external dimensions in this catalog do not include tolerances allowed in mass production, but do indicate average values to serve as technical suggestions for your appropriate selection and operation of the pumps.

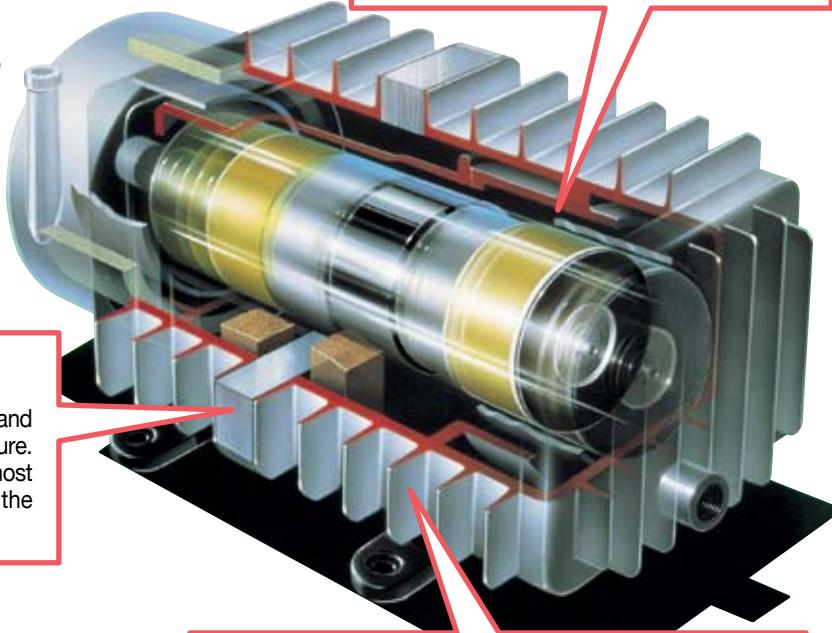

Our air compressors and vacuum pumps are unique products featuring a Linear-motor-driven Free Piston System. Nitto Kohki has made available a complete series of air compressors and vacuum pumps that incorporate this revolutionary mechanism. These are quite appropriate as air sources or vacuum units for various pneumatically operated equipment and apparatus in advanced industries.

Linear-motor-driven Free Piston Mechanism

The Electro-magnet and return spring alternatively drive the piston inside the cylinder, the mechanical resonance of which is synchronized with the input current cycle. In a single mechanism, the piston combines the functions of two normally independent devices; the pump and the motor.

Self-cooling Design

Cool intake air passes over the coils to reduce and control the rise in the pump's internal temperature. As a result of this feature, it is possible to almost completely seal the unit, thus improving the suppression of internal operating noise.

Overpressure Control Mechanism

Should the output pressure exceed the rated value, the piston will automatically adjust to a shorter stroke. Simultaneously, power consumption will automatically reduce to prevent the motor from failing or being burnt out.

Piston System is not only ideal for upgrading next-generation vibration free, the extremely reliable your system performance and

Easy Maintenance

Replacement of piston can be easily performed by simply removing the screws holding the head cover in place. The completely oil-less construction is achieved by the combination of smooth Teflon seals with superior resistance against abrasion on sliding piston surfaces and "air bearing effect" created by the unique air path design.

*Please receive technical guidance from Nitto Kohki before replacing the piston.

Fewer Components

This uniquely simple and reliable design has no complicated transmission components such as crankshafts, connecting rods, ball bearings, etc. typically found in conventional pump designs. Fewer parts mean fewer problems.

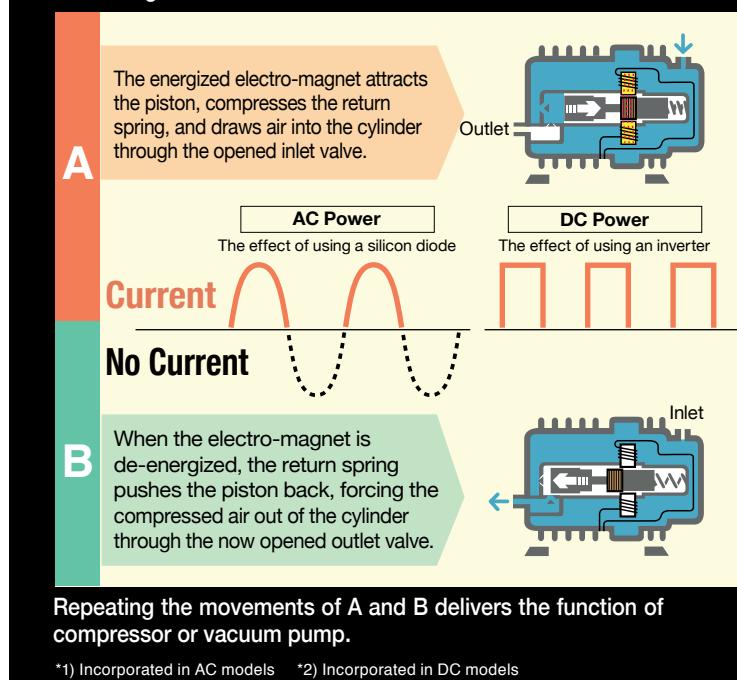

Compact Integrated Design

This unique system enables the mechanical resonance of a single part. An incredibly compact, lightweight design is achieved by combining what are entirely independent functions in conventional pumps – the motor and the compressor – into a superior single, unified structure.

Operating Principle

A silicon diode^{*1} in between the coils or inverter^{*2} converts the full-wave input current into half-rectified current. In turn this activates and deactivates the electro-magnet, producing a smooth mechanically resonating action.

Experience gained in designing, engineering, manufacturing and continually perfecting our products in thousands of applications has resulted in a “functionally intelligent” package. Please review these key design features and see how every design element contributes overall to the creation of a superior compressor or vacuum pump.

The Key Design Features of the Linear-motor-driven Free Piston System

Compact and Lightweight with the motor and compressor combined into the single structure

With the piston as the only moving part, efficient space utilization enables our pump to be considerably smaller and lighter than other pumps. This allows the OEM design engineer increased packaging options for other internal components.

Low Vibration Using an ultra-lightweight piston

Reducing the moving parts to only the piston minimizes reactive force vibrations to the pump body. In addition, the secondary vibrations are isolated or absorbed through the anti-vibration rubber feet.

Low Noise Level No transmission assemblies, means less noise

With no need for complicated transmission mechanisms riding on ball bearings, or actuating linkages creating friction and noise, Nitto Kohki's pumps are inherently quieter. Additionally, the almost completely sealed configuration further suppresses secondary internal operating noises.

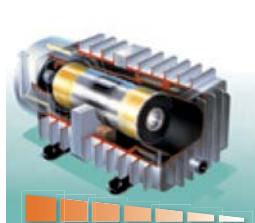

Clean Operation – Clean Air Due to oil-less construction

All wearing surfaces use no oil, grease or other contaminating lubricants. The combination of a precision Teflon sleeved piston assisted by an “air-bearing effect” made possible through a unique air path design, assures that the outlet air is completely free of oil.

Low Power Consumption Truly energy efficient through integrated design

Since the low mass piston is the only moving part, frictional losses are minimized, allowing lower starting and running current, and thus greater efficiency. Related benefits are realized through a lower rise in temperature, facilitating a longer operating life for the pump and the other components within your system.

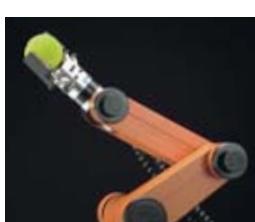

Overload Protection Structure protects against burnout

As the pressure within the compressor increases, the piston stroke decreases. Along with this, electric current decreases. Thus a temporary overload will not cause a failure or the pump to burnout.

Minimal Pulsating Effect due to the ideal piston stroke

The piston's mechanical resonance speed is synchronized with the input power frequency regardless of the load, i.e., 3000 strokes at 50Hz, and 3600 strokes at 60Hz per minute. This high speed produces shorter pulses which translate into a smoother, more uniform and “linear” motion.

Instant Response enabling easy start-ups in frequent on-off short cycle applications

A very low starting current enables our pumps to produce immediate performance in quick short cycle applications, even in the presence of residual back pressure.

Easy Maintenance Only air filter and piston to change

The oil-less construction requires no lubrication. A simple mechanism containing the piston as the only moving part causes no failure or burning due to an overload and provides stable performance over a long period of time.

Longer Durability increased OEM value

All key design features listed here combine to provide superior performance in all the important aspects of superior pump design. This enables the OEM engineer to have complete confidence in incorporating the unit into the most demanding systems, in the most advanced equipment.

How to Use This Catalog

This catalog is designed to help you in selecting the most appropriate product for your specific application. The INDEXS on page 1, 2, and 3 show the corresponding pages to particular models. The page on which each model is shown consists of a specification table, a performance

chart, a power consumption chart, and an external/mounting dimensions diagram. Be sure to read the following "Explanation of Technical Terms" before selecting a model appropriate for your application.

Explanation of Technical Terms

For Compressors

Rated pressure:	This is the pressure point where you will get optimum capabilities for performance and service life and where the pump is designed to have almost the same airflow regardless of a rated frequency of 50Hz or 60Hz.
Rated airflow:	The discharge airflow volume at the rated pressure.
Rated operation:	Operating conditions regarding the rated pressure, rated voltage, and rated frequency.
Maximum pressure:	The highest obtainable pressure at which the pump is designed to operate while producing zero discharge airflow (not guaranteed; for reference only).
Power consumption:	The wattage during operation at the rated pressure.
Current:	The electric current during operation at the rated pressure (for reference only).
Duty cycle:	The period of operation under the condition that the coil temperature will not exceed the coil insulation class limit.
Airflow characteristics:	Discharge pressure-airflow curve (for reference only).
Power consumption characteristics	Discharge pressure-power consumption curve (for reference only).

For Vacuum Pumps

Maximum vacuum:	The highest vacuum the pump can attain with the pump inlet closed (except some of the exclusive models).
Free air displacement:	The airflow volume at zero vacuum (within three (3) minutes after starting).
Power consumption:	The maximum wattage on the power consumption curve when measured against vacuum levels up to the pumps attainable vacuum.
Electric current:	The maximum electric current on the current characteristics curve when measured against vacuum levels up to the pumps attainable vacuum. (for reference only).
Duty cycle:	The period of operation under the condition that the coil temperature will not exceed the coil insulation class limit.
Airflow characteristics:	Vacuum-airflow curve (for reference only).
Power consumption characteristics:	Vacuum-power consumption curve (for reference only).
Exhaust characteristics:	The time required to attain the respective vacuum in a 10 liter container (for reference only).

For DC Pumps

Operating ambient temperature:	0 to 40°C (5 to 50°C for DP0105 only)
Operating ambient humidity:	30 to 85% non-condensing
Start-up the pump at the same level as the atmospheric pressure (Similarly in the case of DPE series pumps)	

Application Examples and Applicable Fluids for Compressors and Vacuum Pumps

Application: for incorporation into equipment **Applicable fluid:** Air

For Compressors & Vacuum Pumps

Rated performance:	The average total accumulated time over which the unit can be used without repair, except the maintenance of the filter. This indicates the expected time required for the rated air flow to fall to 80% of the specification value. The actual life might vary depending on the actual operating and environmental conditions such as output pressure setting, maintenance schedule, ventilation, ambient temperature, duty cycle, etc.
Rated voltage:	The two major types are 115V AC/60Hz and 230V AC/50Hz (excluding DC motors). While most models can be operated at both 50Hz and 60Hz with different performance characteristics, there are some models that are frequency specific.
Rated frequency:	In the case of AC drive pumps, the rated frequency will vary according to the model. While some are designed for only 50Hz or for 60Hz, some are designed for both 50Hz and 60Hz.
Coil insulations:	The suggested class, most bare units attaining "E" class, is based on Japanese electric regulations. They are merely suggestions since bare units are considered "components" and are not classified as complete products or systems.
Control method:	Be careful when controlling compressors and vacuum pumps with electronic components because the power factor depends upon the load.

Coil Insulation Class (for reference only)	(Temperature limit, degrees C)
A	100
E	115
B	125
F	150

Outside & mounting dimensions:	Useful for assessing the required space for installation. Include sufficient space surrounding the pump when designing it into your application.
Operating ambient temperature:	0 to 40°C
Operating ambient humidity:	30 to 85% non-condensing

For Liquid Pumps

Self-priming power:	The power the pump requires to draw up 25°C water. 1 kPa is equal to the power needed to draw up 25°C water 10 cm.
----------------------------	--

Improvement Suggestion

Our compressors and vacuum pumps employ a unique internal coil cooling feature to reduce or control the rise in internal temperature. If they are operated at higher than rated pressures, elevated temperatures may result. Should these temperatures become excessive, operating duty cycles may need to be reduced, or the use of an auxiliary cooling fan should be considered.

This catalogue will give the guidelines needed to determine the appropriate model for your application(s). However, in certain cases you may need further detailed information, which will be provided in the form of a specifications sheet for each model/version by our technical staff who will further assist you in your selection.

Specifications and designs are subject to change at any time without notice.

It is recommended that OEM customers confirm the required specifications in writing before placing orders.

The performance data is measured at the rated conditions.

- 1)The reference data is based on water at 25 degrees Celsius with unloaded condition.
- 2)The ambient operating temperature range is from 5 to 50 degrees Celsius, the ambient liquid temperature range is from 5 to 50 degrees Celsius (non-freezing), and the ambient operating humidity range is from 35 to 85% (non-condensing). When the liquid temperature is low, the valve will be hardened. As a result, the flow rate will be decreased. This could be applied for liquids with high viscosity. The materials that will be under influence of the applied liquids are the housing, liquid contact sheets, valves, and

O-rings. Please confirm the suitability under any applied conditions. Any minute quantities of additives and composite materials found in certain liquids may influence the performance of the unit several months later.

- 3)You may use the product at low voltage, but it will result in lower outlet pressure.
- 4)Performance may be compromised by restrictive tubing/piping or mounting position of the pump in the application.
- 5)The above performance data is measured at the rated condition as we described.

Note: The Bimor does not fulfill explosion-proof construction in any applications. Please install isolating transformers or similar protective devices on the wiring for your safety.

Compact, lightweight, durable & quiet

As the Bimorph also acts as a diaphragm it has no motors or shafts or other troublesome mechanisms, and thus minimal vibrations and fewer breakdowns. The Bimor is lighter, quieter and more durable than traditional pumps. We have achieved maintenance free continuous operation for 60 months.

Low power consumption & electromagnetic noise

The Bimor is driven by low energy consuming piezoelectric elements. Consequently it costs very little to run and emits virtually no electromagnetic noise.

Simple flow rate adjustment

As the flow rate of the Bimor is proportional to the voltage and frequency, adjusting the flow rate is as simple as adjusting either one.

You may use the product at the rated voltage or lower.

Application versatility

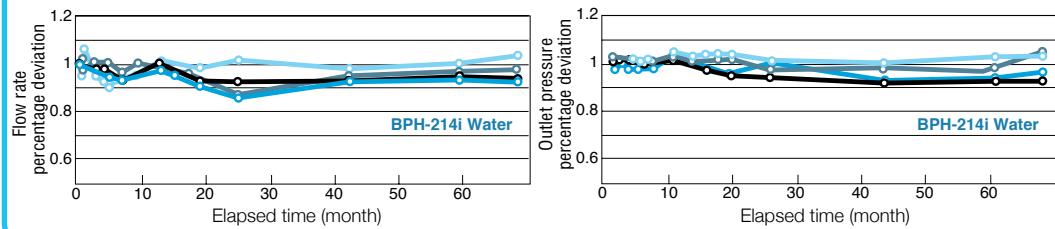

The parts can be made of several different materials, so you can select the material appropriate to your needs, be it a liquid application. The Bimor is currently employed in a variety of different fields including medicine, scientific research, and the PC and chemical industries.

The following "Examples of suitable chemical liquids" should be used for reference only. Please confirm the suitability under any applied conditions by yourself.

The Next Step in Pump Miniaturization

Revolutionary piezoelectric bimorph technology

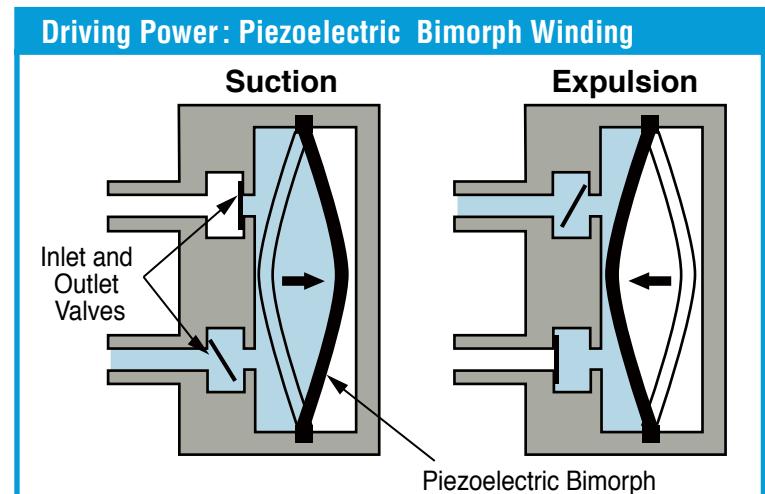

The Bimor's driving force, the bimorph, comprises two parallel piezoelectric wafers. Their nature is to expand or contract depending on the direction of the voltage. Therefore when an alternating current is applied, one wafer expands then contracts while the other contracts then expands, causing the bimorph to bend. Repeating the cycle creates the pumping action.

Cross section

Principle / Structure

"The Bimor pump" uses the displacement operation of the piezoelectric bimorph vibrator as the direct source of the pumping action.

DC Liquid Pump

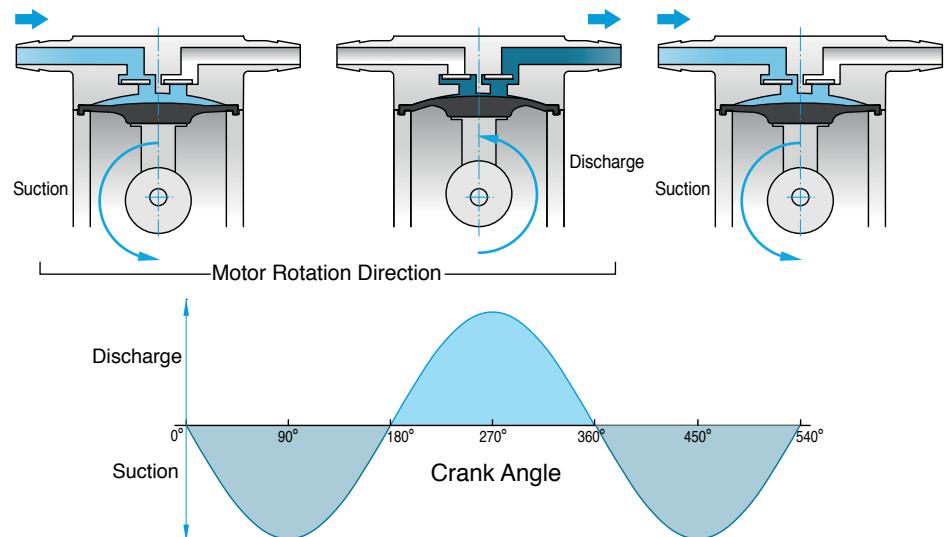

DPE series

- **Built-in Pulse Absorption Chamber**
- **Many build material options for different liquids**
- **Self-priming type with air suction acceptable**

Typical Conventional Pump without Pulse Absorption

As liquid is transported through the suction and discharge passages of the pump and liquid circuit, high pulsations can be created which can cause cavitation, vibration in tubing, fittings, peak pulsing noises, and added stress and wear to pump mechanisms. These negative results are often increased through the use of small pumps having relatively high rotational speeds.

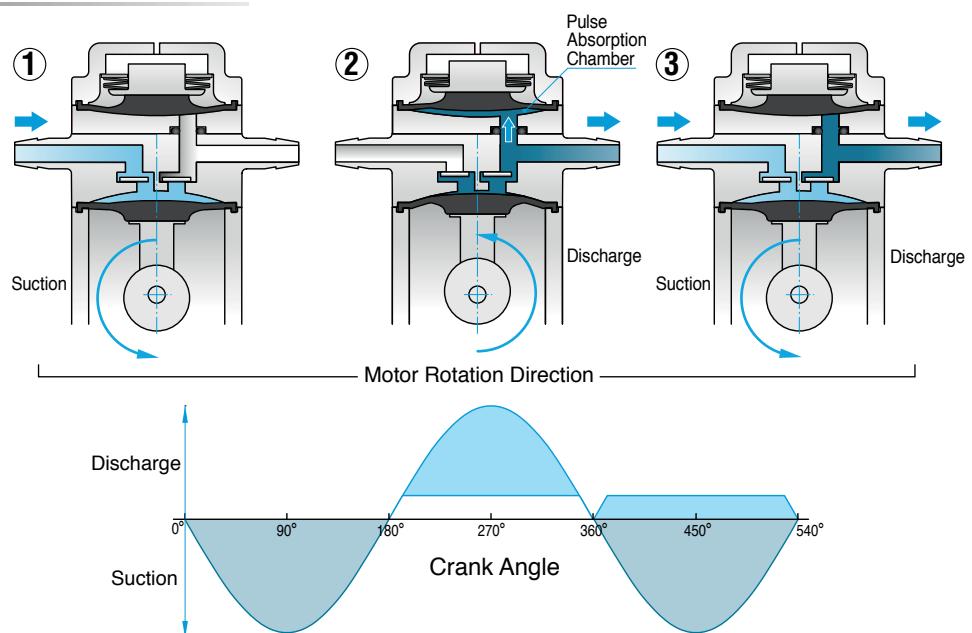

Advanced design DPE Pump with Pulse Absorption

Provides pulse attenuation which helps to create steady state flow, reduced noise and vibration throughout the fluid circuit, and enhances life of the pump and other circuit components. It's designed in... No need for additional installation cost or space with pulsation dampers.

- ① Suction
- ② Discharge. Partial fluid delivery to pulse absorption chamber, not directly forced to outlet port.
- ③ Cyclical suction drawn into pump is synchronized with the discharge.

Pulses are attenuated through the process of ② and ③.

^{*1} At low temperature, the performance may reduce.^{*2} Pumps may not re-start against high backpressure.

*3 Life expectancy is based on the following conditions:

Rated voltage: 24 V DC, Atmospheric pressure: 0 kPa, Fluid: water at 25°C

Please read the page of "How to Use This Catalog" first for correct use of compressors and pumps.

Build materials and applicable fluids

Model	Cylinder Head	Head Cover	Diaphragm	Valve	O-ring	Applicable fluids
DPE-400BL-2E	PA			EPDM	Ethylene-propylene rubber	Sodium hydroxide, Citric acid, Ammonia water, Caustic potash
DPE-400BL-2G		Polyamide(Nylon)		PTFE		Ethanol, Ethylene glycol, Sodium carbonate, mineral oil
DPE-400BL-7G			PTFE	FKM	Fluoro rubber	Xylene, Carbon tetrachloride, Trichloroethylene, Silicon oils
DPE-400BL-7P	PPS		Polytetrafluoroethylene		FFKM	Chloroform, Benzene, Glacial acetic acid, Methyl ethyl ketone
		Polyphenylene sulfide				

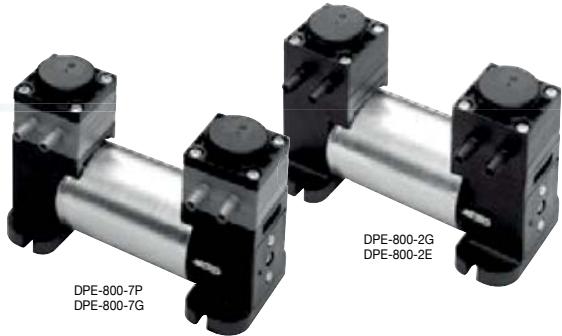

Application Examples

- Liquid analytical instruments e.g. medical, food, water treatment & environmental.
- Liquid transport within filtration, sampling, sterilizers and washers.
- Ink transport within industrial ink-jet printers.

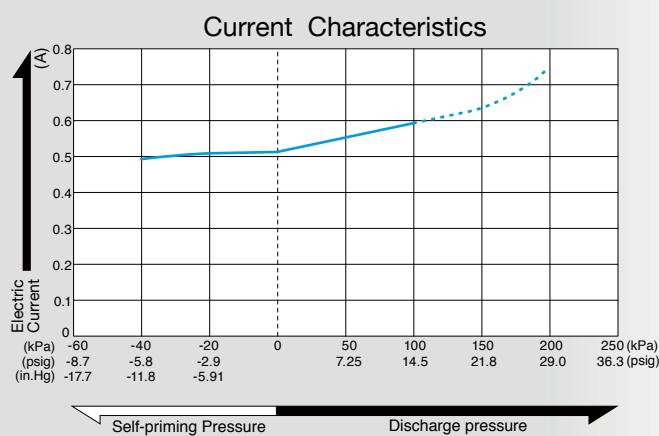

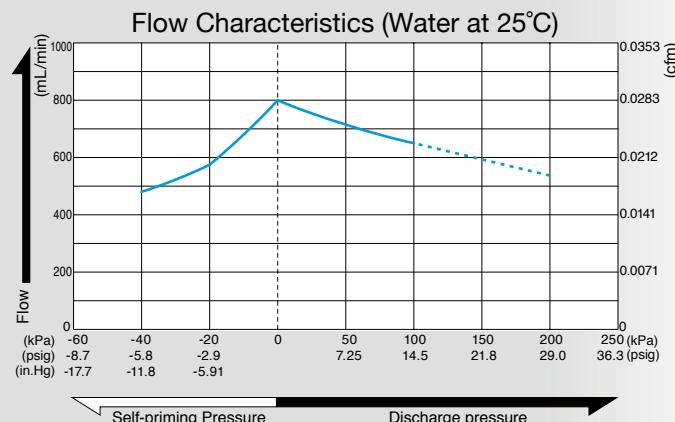

DC Liquid Pump

Model DPE-800

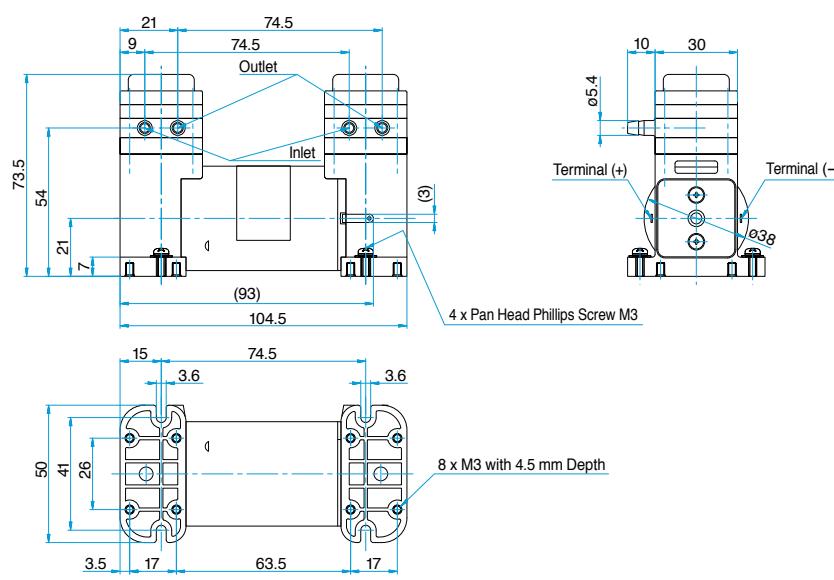

Brush DC Motor 24 V DC

Flow & Electric Current

Dimensional Outline Drawing (Unit: mm)

Specifications

Rated Voltage	24 V DC
Flow Rate ^{*1}	800 mL/min 0.0283 cfm
Working Pressure Range	0 to 100 kPa 0 to 1 bar 0 to 14.2 psig
Maximum Pressure ^{*2}	300 kPa 3 bar 42.7 psig
Maxumu Current	600 mA
Duty Cycle	Continuous
Rated Performance (MTTF)	600 hours
Self-priming Pressure	40 kPa 0.4 bar 5.69 psig
Inlet	5.4 mm O.D. straight barb
Outlet	5.4 mm O.D. straight barb
Insulation Classification	E class equivalent
Mounting Dimensions	74.5 (L) x 41 (W) mm 2-15/16"(L) x 1-39/64"(W)
Weight	350 g 0.771 Lbs
Motor	Brush DC Motor

^{*1}When the check valve is hardened due to low liquid temperature, self-priming performance and flow rate will go down.

^{*2}Restarting pumps with flow passage closed is impossible.

3.Tubing between two pumping heads must be done in parallel.
Tubing in series between the two pumping heads should not be made. This may cause extreme pressure hike that will result in broken parts, liquid splash out or possible ignition.

Please read the page of "How to Use This Catalog" first for correct use of compressors and pumps.

LINICON (VACUUM PUMP)

LV-125A

LINICON (Vacuum Pump)

Model LV-125A

Oil-less Compressor

- AC linear free piston vacuum pump
- Equipped with fuse and removable power cable
- Compact and lightweight
- Low noise level
- Oil-less construction

Specifications

Rated Voltage	115 V AC	230 V AC
Power Consumption	14 W	15 W
Rated Frequency	60 Hz	50 Hz
Maximum Vacuum	-33.3 kPa (-250 mm Hg, -333 mbar, -9.84 in. Hg)	
Dimensions	135 (L) x 91 (W) x 146 (H) mm (5-5/16" x 3-37/64" x 5-3/4")	
Duty Cycle	Continuous	
Coil Insulation Class	B or its equivalent	E or its equivalent
Weight	1.5 kg (3.3 lbs.)	

Please read the page of "How to Use This Catalog" first for correct use of compressors and pumps.

Vacuum Pick-Up Set

If the following options are prepared together with Model LV-125A, the Vacuum Pick-Up Set can be arranged.

- LB07629 Vacuum pen assembly
- LQ01267 Tube 3 x 5 x 2000
- LA71242 Needle 1 x 1.5 x 40 (6 pcs/set)
- LP30884 Pad 6 mm dia.
- LP30885 Pad 4 mm dia.
- LA71143 Pen stand

The needle can be bent in accordance with applications.

High Adsorption Power

In the case that the depth of vacuum is -33.3 kPa (-250 mmHg) and the surface to be vacuумed is flat.

Pad Diameter	A Suction power when the adsorption face is placed horizontally and moved upward.	B Suction power when the adsorption face is placed vertically and moved laterally.
4 mm	20 g	10 g
6 mm	50 g	25 g

Adsorption power: $W(g) = D^2 \times 7.85 \times 250 / 736$

A is calculated by multiplying the safety rate of 0.5 to the above equation, and then rounded.

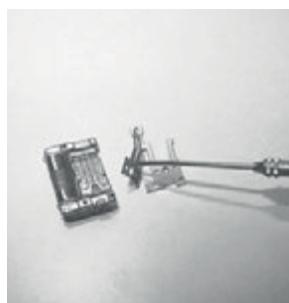

B is calculated by multiplying the safety rate of 0.25 to the above equation, and then rounded.

Application Examples

Transferring spherical objects such as balls

Assembling precision parts

Moving tiny parts

Transferring uneven parts

Most suitable for handling electronic parts such as ICs and LSIs. Also small parts, micro parts such as those in watches and chemicals.

Plastic Cupla BC Type Valveless

For low pressure air piping

Working pressure	Valve structure	Applicable fluid
0.07MPa (0.7kgf/cm ²)	Straight through	Air

- To connect, just push the plug into the socket.
- Plastic makes this ideal for use in environment prone to rusting.
- Compact and light weight for easy handling.
- Valveless construction gives more stable flow.

Micro Cupla

For piping in pneumatic control devices

Working pressure	Valve structure	Applicable fluids
1.0MPa (10kgf/cm ²)	One-way shut-off	Air Water

- Even though the valve is built in the socket, the sleeve outer diameter is confined to 9.5 mm.
- Compact design for piping in narrow spaces.
- Push-to-connect operation. Tube Fitter type for even easier tube insertion.
- Plated brass and stainless bodies are available for excellent corrosion resistance.
- Available in various end configurations to satisfy a wide range of pneumatic applications.

Super Cupla

Light, compact for air piping connections

Working pressure	Valve structure	Applicable fluid
1.0MPa (10kgf/cm ²)	One-way shut-off	Air

- Lightweight design suits direct connection to power tools.
- Push-to-connect for easy operation.
- Also available with quick connect/disconnect Tube Fitter type.
- Chrome-plated steel for corrosion resistance adopted for the body. (Partly aluminum)
- Available in various end configurations for a wide range of pneumatic applications.

Hi Cupla

Universal purpose couplings for air lines

Working pressure	Valve structure	Applicable fluids (Steel applies to air only)
1.5MPa (15kgf/cm ²)	1.0MPa (10kgf/cm ²)	Air Water
	One-way shut-off	

- An excellent general purpose coupling for connecting factory air supply to pneumatic tools.
- Steel coupling is suitable for air. Brass or stainless steel is suitable for water.
- Critical structural parts of steel models are heat-treated for increased strength giving greater durability and resistance to wear.
- Available in various body materials, sizes and end configurations applicable to a wide range of applications.

Cube Cupla

Small and lightweight coupling for air supply lines to medical and/or scientific equipment

Working pressure	Valve structure	Applicable fluids
0.07MPa (0.7kgf/cm ²)	Two-way shut-off	Air Water

- Ultra-lightweight, made of polyacetal resin. Compact design for space saving.
- Just push plug into socket for connection. Simply press the button on the socket for disconnection.
- Both socket and plug have built-in valve types and valveless types. Valveless structure suits high viscosity fluids.
- Suitable for a wide range of applications from medical/scientific equipment to beverage machines or semiconductor manufacturing devices.

Small Cupla

Lightweight and compact for use on air lines and scientific equipment

Working pressure	Valve structure	Applicable fluids
0.7MPa (7kgf/cm ²)	One-way shut-off	Air Water

- Compact socket with built-in valve and 14 mm OD sleeve.
- Just push in the plug to the socket for connection.
- Also available with quick connect/disconnect Tube Fitter type.
- Chrome-plated brass for corrosion resistance adopted for the body.
- Available in various end configurations to satisfy a wide range of pneumatic applications.

Hi Cupla 200

Push-to-connect type for air lines

Working pressure	Valve structure	Applicable fluid
1.5MPa (15kgf/cm ²)	One-way shut-off	Air

- Just push the plug into the socket for simple and secure connection.
- New valve design for low pressure loss to achieve flow rate increase (15% up over the conventional model).
- End-face seal is achieved when connected.
- Enhanced operability with low connection resistance.
- End-face seal design is superior to external seal with an O-ring due to no seal damage caused by exhausted lubrication.
- Also available with quick connect/disconnect Tube Fitter type.

Hi Cupla Ace

Lightweight plastic coupling with automatic safety lock for air line applications

Working pressure	Valve structure	Applicable fluids
1.5MPa (15kgf/cm ²)	One-way shut-off	Air Water

- Pressure ratings comparable to steel Cuplas.
- A built in "automatic lock mechanism" locks the sleeve upon connection, thus prevents accidental disconnection.
- Just push plug into socket for simple connection.
- The weight is a quarter of steel Hi Cupla for easy handling.
- Can be used for air and water.

Precautions for Compressors and Vacuum Pumps

CAUTION		WARNING Do not let the unit draw in or discharge any gas other than air. This may cause an explosion, fire or electric shock.	Avoid drawing in water and splashing any water on the unit. Otherwise there is the risk of a short circuit causing a fire or electric shock.
Do not use the unit with a power supply other than the voltage shown on the unit. Doing so may cause a fire or electric shock.	Do not install the unit in a completely enclosed case (box) without proper or adequate ventilation. This may cause a fire or electric shock.	Use the unit within the proposed ambient temperature range. Using it out of the range may cause a fire or electric shock.	Units must not be modified. Modifications may cause a fire or electric shock.
Do not place combustible materials near the unit. This may cause a fire.	The grounding screw of the unit should be utilized, except when connected to a double insulation device. Not grounding the unit may result in a fire or electric shock.	The unit must be installed at a level higher than the water surface when it is used for bubbling. If the unit is installed at a level lower than the water surface, fluid may flow into the unit and cause an electric shock.	Do not allow anything to be placed on or to fall onto the lead wires. This may damage them and cause a fire or electric shock.
Do not pull, scratch, forcefully bend, twist or heat the lead wires. This may damage them and cause a fire or electric shock.	When incorporating the unit into a device, the lead wires from the unit should be connected securely to the wiring of the device by means of soldering, crimping or by the use of screws. Insufficient connections may cause a fire or electric shock.	The unit must not be disassembled or repaired by anyone other than a person who has received Nitto Kohki technical training. (Except in the case of filter and piston maintenance and inspection in accordance with the operation manual.) Otherwise it may result in a fire or electric shock.	The unit must be disconnected from its power source before cleaning or replacing filters. Failure to do so may result in an electric shock or injury.
When drawing in air contaminated with moisture, powder, or dust, add an external device to the unit for removing them. If these contaminants are drawn in, it may cause an electric shock. *Only for vacuum pumps.			

Precautions for Blowers

CAUTION		WARNING Do not let the unit draw in or discharge any gas other than air. This may cause an explosion, fire or electric shock.	
Do not install the unit in a place where it may be soaked with water or covered with snow. This may cause an electric shock or fire.	Do not use the unit in hot and humid conditions. This may cause an electric shock, breakdown or fire.	Always place the unit above water level. Failure to do so may result in an electric shock or breakdown.	Use a waterproof wall outlet to supply power to the unit. Failure to do so may cause an electric shock or fire.
Use a power supply equipped with a ground-fault interrupter and overcurrent breaker. Failure to do so may cause an electric shock or fire.	Have a qualified electrician do the electrical work. Failure to do so may cause an electric shock or fire.	Never modify the unit. This may cause an electric shock, breakdown, or fire.	Do not use the unit with the outlet port closed or at free displacement. This may cause an electric shock, breakdown, or fire.
The power supply voltage must be limited to the individual unit specifications as stated on the nameplate or instruction manual. Failure to do so may cause an electric shock or fire.	Never touch the power plug with wet hands. This may cause an electric shock.	Insert the power plug securely into the innermost position. Failure to do so may cause an electric shock.	Do not put anything on the power cable. Doing so may cause a fire or electric shock.
Do not place anything near the unit (within about 50cm). Doing so may cause an electric shock or fire.	Do not use the unit in a place where flammable materials, such as gasoline, thinner, lacquer, benzene, etc. are being used. This may cause a fire or explosion.	Check the power plug at least once a year for dirt and dust and clean if necessary. Failure to do so may result in an electric shock or fire.	The power plug must be disconnected before the air filter is cleaned or replaced. Failure to do so may cause an electric shock or accident.
Always grasp the power plug to disconnect the unit from the socket. Pulling it out by the cord may cause an electric shock or breakdown.	Any removed air filter must be replaced before the operation is resumed. Failure to do so may cause an electric shock or breakdown.	Never try to disassemble or repair the unit. This may cause an electric shock, breakdown, fire or injury. Any repairs must be done by an electrician authorized by Nitto distributors.	Do not cover the Blower with a box or the like without proper or adequate ventilation. Doing so may cause a breakdown or fire.

Precautions for DC-Motor Pumps

Connect the plus terminal (If there is no indication of the plus terminal, use the terminal with a red mark as the plus terminal.) or the red lead wire of the unit to the plus terminal of the DC power source. Reverse connection may cause a breakdown, malfunction, or reduced rated performance.

Precautions for Liquid Pumps

CAUTION		WARNING Confirm the suitability of the liquid that passes through the unit before use. Failure to do so may cause a leak, explosion, fire or electric shock.	
Avoid any liquid contaminated with solids such as debris or dust. If dust or debris sticks to the valve, the unit may not perform properly. When the intrusion of dust or debris is expected, be sure to place a filter on the inlet side of the unit.	Avoid any liquid that may crystallize. If crystals stick to the valve, the unit may not perform properly. A preliminary test on the unit with the liquid to be used is recommended.	The performance of the unit is measured with the pump in its proper mounting position, which is described in the user's manual. Different mounting positions or nozzle directions may result in different performances.	There may be a risk that even a slight liquid pressure can open the valve due to siphon phenomenon. Place the outlet port at a position higher than the water level in the supply tank, or install a check valve if necessary to prevent water from being siphoned into the pump.

When Using Compressors and Vacuum Pumps

Check with our distributor in advance if you plan to use the compressor/vacuum pump at free displacement (0kPa), or the vacuum pump with inlet port closed, or the compressor at maximum pressure.

As compressors and vacuum pumps employ a self-cooling system, if the units are used at more than the rated pressure, the duty cycle of some of the models will need to be shortened.	<ul style="list-style-type: none"> • When wanting to increase the duty cycle, it is recommended to use a fan to cool the compressor. • Do not use the compressor near flammable liquid gas. • Do not use the compressor in the rain or in wet and damp places. • Do not allow the pump to draw in corrosive gas. 	<ul style="list-style-type: none"> • Be sure to install and use the compressor at a position higher than water level. 	
--	--	--	--

Handling Problems

In any of the below cases, stop operation immediately, switch off the power and disconnect the unit from the power supply. Ask our distributor for repair.

- When oil such as a lubricant has been applied to the unit in error.
- When the unit has suffered a severe impact such as being dropped.
- When liquid such as water has entered into the unit by mistake.
- When an abnormal operation is observed, such as the emission of smoke, or an unusual smell or noise.

Precautions for Pumps with Brush Motor

As operational time is increased, the value of insulation resistance becomes lower than that of the initial insulation resistance.
If the outer surface of motor and the grounding of the power source are connected, do a preliminarily check to assure no issues occur.

Our Product Warranty

Our Products are covered by a limited warranty ("Warranty") under the following conditions.

1. Duration: depends on individual products and their specifications

2. Service: repair or replacement at our option

Please be aware that a warranty claim will not be reimbursed with a cash payment

3. Object Person: original purchaser from our designated distributors

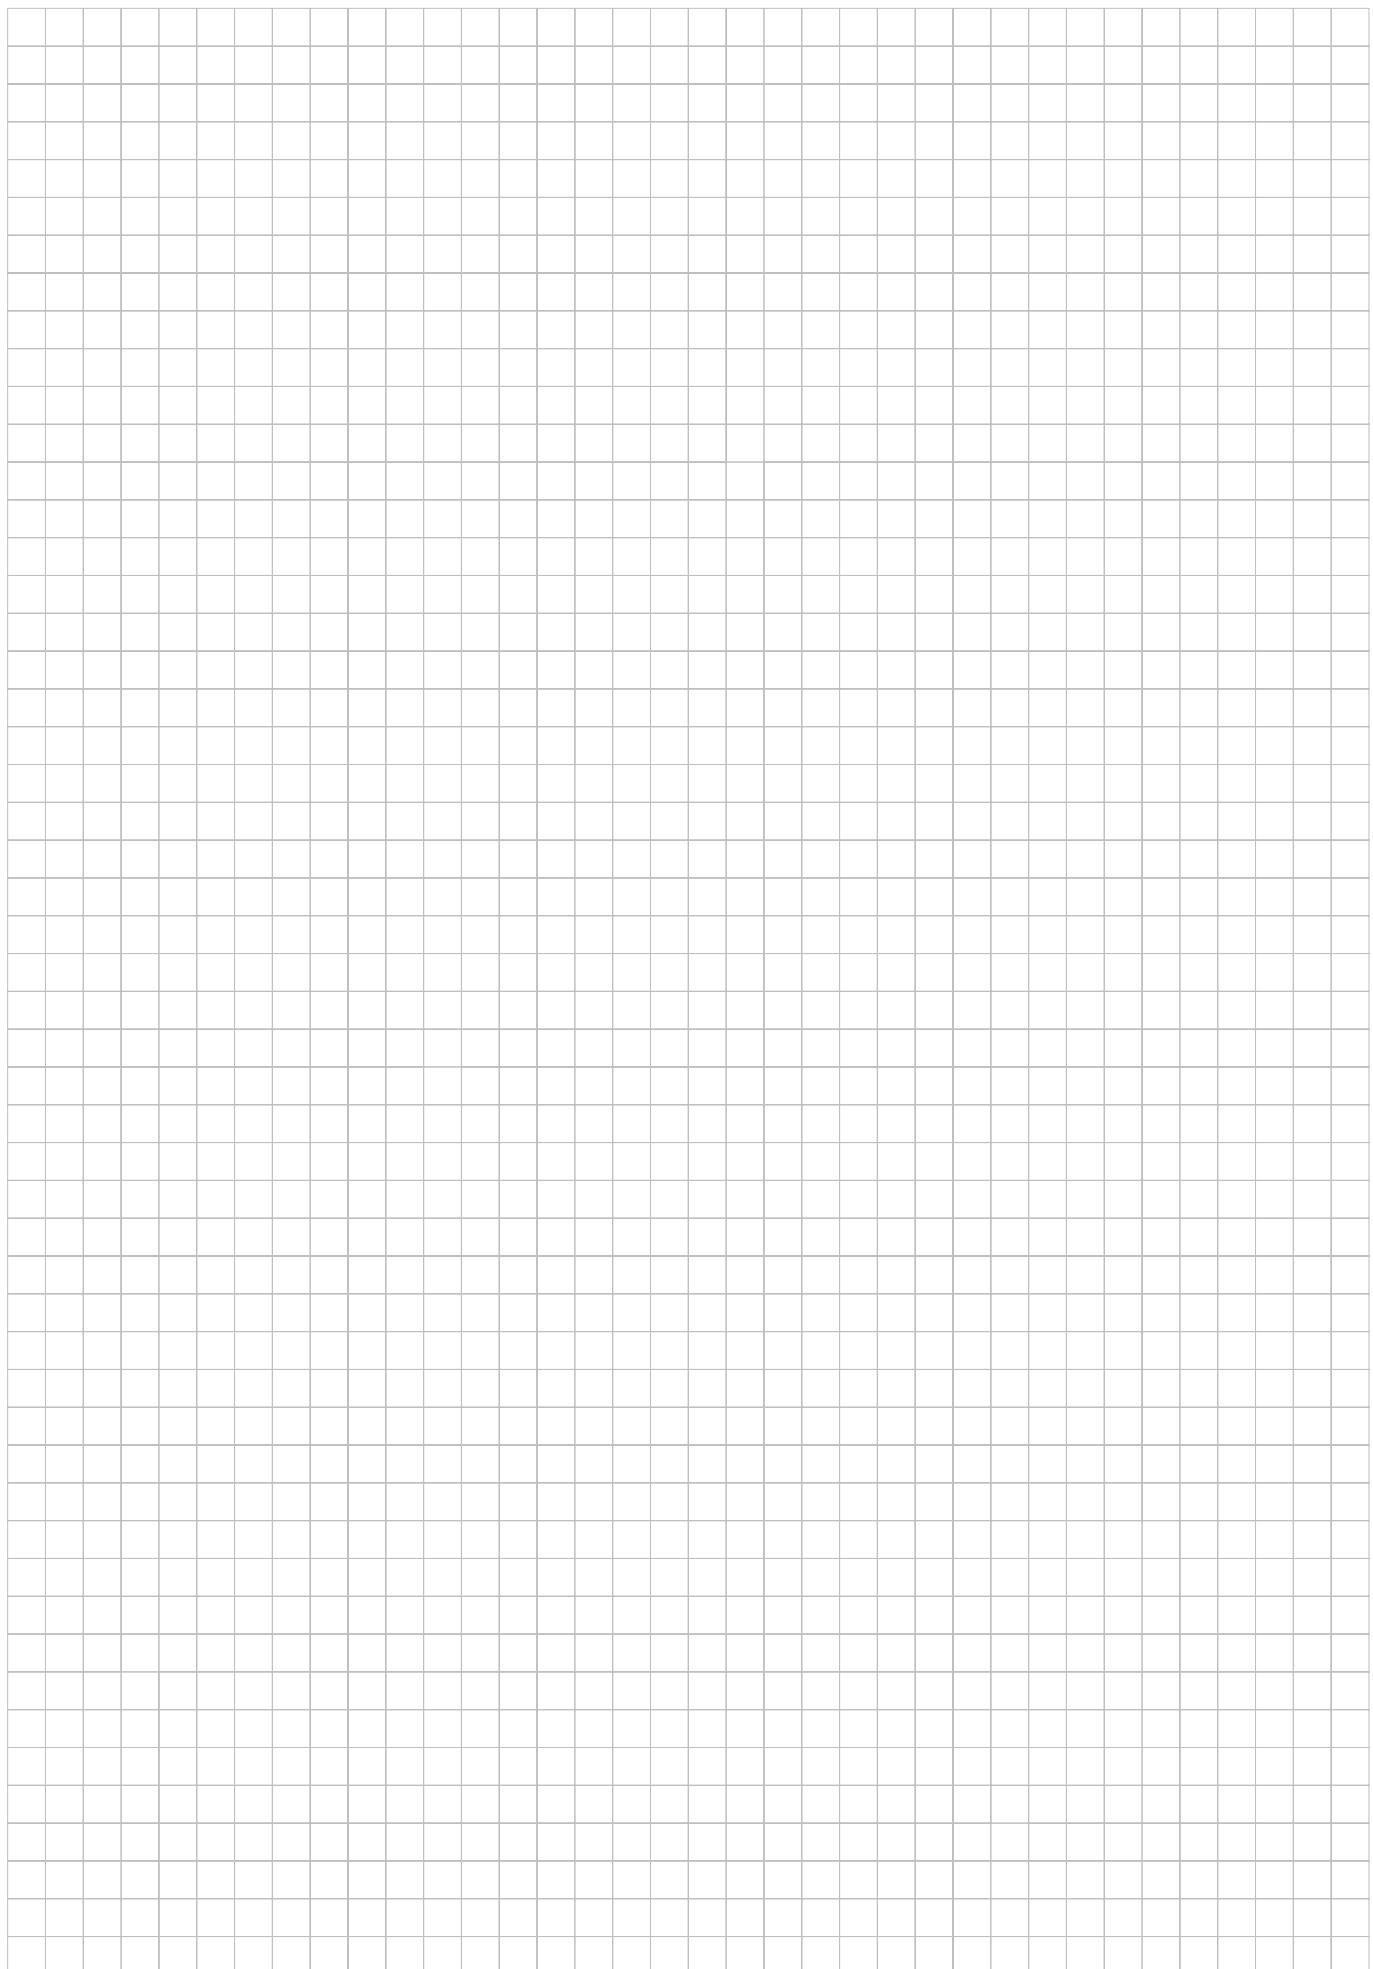

4. Out of Warranty

The following conditions are not covered by Warranty

- purchaser improperly used our products.
- purchaser did not comply with specifications and instructions stipulated in this Catalog when using our products, or
- purchaser did not comply with Caution for Safety stipulated in this Catalog when using our products, or
- repairing of our products was done by someone other than us, or
- We are not able to anticipate or predict such defects or causes of failure based on general technical knowledge of the specific application before or at the time of shipment,
- defects are caused by the force majeure or other situations not attributable to us, or
- defects are not clearly attributable to us and
- defects are not about design, material or workmanship.

Limitation of Liability

We, including designated distributors, will not be liable for any special damages or consequential damages and will not have any monetary liability to purchasers.
