Miniature Pumps

Precision Fluidics

Parker

ENGINEERING YOUR SUCCESS.

Innovative Solutions for Health Care Success

ENGINEERING YOUR SUCCESS.

When you partner with the global leader in motion and control technologies, expect to move your business and the world forward. From miniature solenoid valves to highly integrated automation systems, our innovations are critical to life-saving medical devices and scientific instruments used for drug discovery and pathogen detection. Not to mention, critical to decreasing time to market and lowering your overall cost of ownership. So partner with Parker, and get ready to move, well, anything.

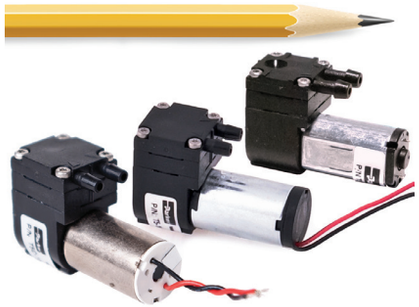
Table of Contents

T2-05

Micro Diaphragm Pumps (air/gas)

Up to 800 mLPM Free Flow



Parker's T2-05 13.5 mm wide micro diaphragm pump is designed to fit where other pumps cannot due to its small, compact package size. The T2-05 flow path is optimized to deliver high flow with high efficiency resulting in extended battery life. The pump's low power, small size, and light weight play a critical role in portable gas detection and medical applications. The T2-05 pump HE and LI pump models enable intrinsic safety capabilities for sampling of hazardous gases, typical of industrial and mining operations. The T2-05 IC pump is designed for compact and wearable medical devices that require less than 1500 hours of pump life. The T2-05 VBIC model is ideal for vacuum only medical applications that benefit from improved sound quality, such as wound therapy.

Typical Markets

- Safety
- Patient Therapy
- Patient Monitoring

Typical Applications

- Portable Gas Detection
- Gas Sampling
- Medical Instruments
- Trace Detection
- Sidestream CO_2
- Negative Pressure Wound Therapy

Features

- The valve design has been optimized to provide the highest flow rates available with the lowest current draw, allowing for longer battery life and smaller instrument size.
- The T2-05 model pump life ranges up to 10,000 rated hours depending on motor (HE, LI and IC) options
- The pump fits into the extremely tight spaces demanded of today's handheld instruments, such as portable gas detectors and portable negative pressure wound therapy devices for patient mobility. The lightweight design minimizes instrument weight.
- RoHS compliant.

Product Specifications*

Physical Properties

Operating Environment[1]:
-4 to 122°F (-20 to 50°C)

Storage Environment:
-4 to 122°F (-20 to 50°C)

Media:
Air, Argon, Helium, Nitrogen, Oxygen, and other non-reacting gases

Humidity:
Most non-condensing gases
5-95% Relative Humidity

Noise Level[2]:
As low as 45dB

Pump Assembly Rated Life[3]:
Coreless Motor-Pump (HE):
Up to 10,000 hours
Coreless Motor-Pump (LI):
Up to 6,000 hours
PMDC Iron Core-Pump (IC):
Up to 1,500 hours

Weight:
0.5 oz (14 g) HE and LI
0.4 oz (11 g) IC

Electrical

Motor Type (DC):
High Efficiency Coreless Brush (HE)
Low Inductance Coreless Brush (LI)
PMDC Iron Core Brush (IC)

Nominal Motor Voltages (DC)[4]:
3.3 VDC

Max Power at Nominal Voltage:
0.36 Watts

Electrical Termination:
HE: Wire Leads
LI: Wire Leads
IC: Solder Tabs

Current Range[5]:
34 - 105 mA

Inductance[6]:
HE: 0.28 mH maximum @ 1kHz/50mV
LI: 0.05 mH maximum @ 1kHz/50mV
IC: 4.07 mH maximum @ 1kHz/50 mV

Pneumatic

Head Configuration: Single

Maximum Flow:
HE, LI: 800 smlpm, IC: 700 smlpm

Maximum Intermittent Pressure[7]:
6.2 psi (430 mbar)

Maximum Continuous Pressure:
2.0 psi (138 mbar)

Maximum Intermittent Vacuum[7]:
10.8 in Hg (274 mm Hg)

Maximum Continuous Vacuum:
4.1 in Hg (104 mm Hg)

Filtration:
40 micron recommended

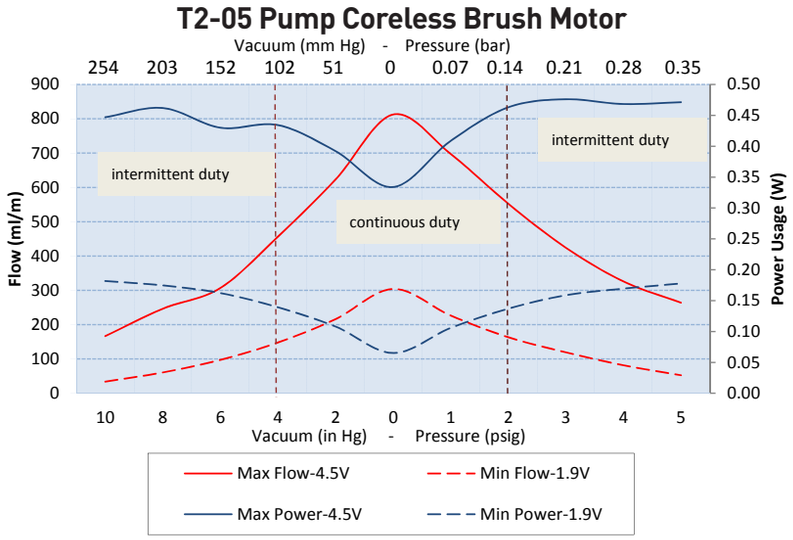
Efficiency at Free Flow[8]:
LPM/Watt: 4.66 @ 1.9 VDC
(*P/N T5-1HE-03-1EEB*)
LPM/Watt: 4.08 @ 1.9 VDC
(*P/N T5-1LI-03-1EEB*)
LPM/Watt: 3.12 @1.9 VDC
(*P/N T5-1IC-03-1EEP*)

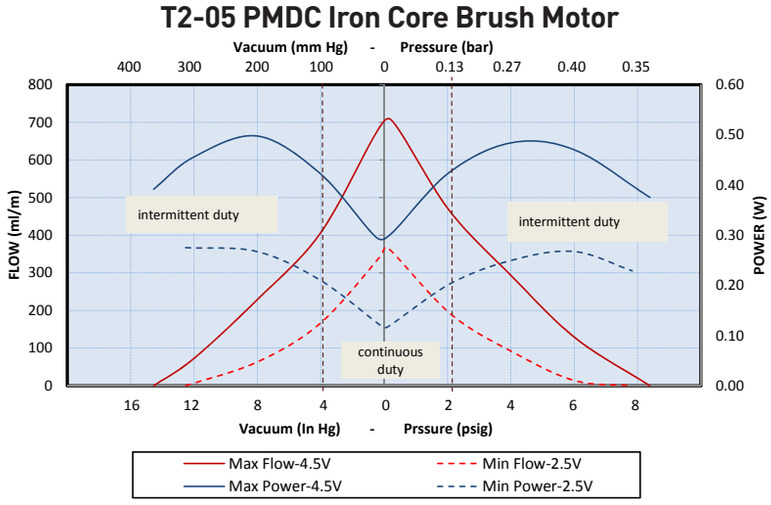
Wetted Materials

Diaphragm: EPDM | **Valves:** EPDM | **Pump Head:** ABS (HE, LI), PBT (IC)

* See Appendix A for details.

Performance Specifications





The above graphs represent examples of performance for the pumps series handling air at 800 feet (244M) above sea level at 75° F (24° C). Performance will vary depending on barometric pressure and media temperature. Curves are representative of standard pump configurations. Pump configurations could be customized for higher or lower flows, depending on specific customer requirements.

Please contact Parker Precision Fluidics Applications Engineering for other considerations

T2-05 Micro Diaphragm Pumps (air/gas)

Sizing and Selection

T2-05 Series	Coreless Brush Motor (High Efficiency)	Coreless Brush Motor (Low Inductance)	PMDC Iron Core Motor (Iron Core)
				HE	**LI**	**IC**
Inductance[6]	Better	Best	N/A
Efficiency at Free Flow[8]	Best	Best	Better
Life[3]	Best	Better	Good
Cost	Good	Better	Best

Mounting Guidelines:

- Parker recommends using a nylon cable tie with a length of at least 4" (100 mm).

Port Connections:

- **HE** & **LI**: 3/32" ID tubing
- **IC**: 1/8" ID tubing

Electrical Integration and Motor Control

Coreless Brush Motor (HE, LI)

2 Wire	Red (+), Black (-)
Wire specification	28 AWG 5.7" (145 mm) Wire Leads

PMDC Iron Core Brush Motor (IC)

Tabs	Standard solder tabs for electrical connection

Key Things to Remember

5.7" (145 mm) flying Leads are the standard electrical connection method to the pump. Contact Parker Engineering for other connection requirements.

Pump life is highly dependent on operating conditions. It is not recommended to run the pump continuously, 100% duty cycle, at higher than 2 psig.

The pump flow and pressure can be controlled by adjusting the input voltage from zero to maximum rated voltage.

The pump is not a pressure holding device. An external check valve is recommended, if there is a pressure holding requirement.

Pump orientation does not affect performance or life.

*PCD: Peak Current Draw

The T5-VBIC-03-1EEP is a T2-05-IC Reduced Sound pump that uses a proprietary design to reduce noise and it is a recommended option in applications where sound quality is also a critical customer need.

T2-05-LI and HE model Sound Improvement options are also available, contact applications for more details. Applications Engineering can assist with sound quality evaluations given the complex relationship between system components and operational requirements of the customer's specific application.

Please refer to sizing and selection chart for identifying which one will fit your application

Please click on the Order On-line button below (or go to www.parker.com/precisionfluidics/t5) to configure your T2-05 Micro Diaphragm Pump.

Serviceable – PPF products are designed for use through the rated life and Parker does not sell replacement parts, nor is it recommended to service these in the field

Note: In addition to Parker's innovative and flexible pump designs, we offer applications engineering expertise to our customers in order to configure and recommend the optimal pump for the application. Contact Parker Applications Engineering to discuss and configure alternate pump configurations to meet your specific application requirements. Providing information on the following requirements will assist us in developing an optimal solution for your application:

- Noise
- Operating Pressure / Vacuum
- Power Consumption
- Life Requirement
- Size
- Motor Control
- Media
- Voltage

Appendix A

All performance data is typical based on standard conditions: 70°F and 14.7 psia (21°C and 1 bar).

1. Duty Dependent. For operation above 122°F (50°C) consult factory

2. Noise is dependent on the configuration and operation of the pump in the application. Parker has the ability to tailor the pump configuration when noise is a critical criterion in the effort to meet the performance requirements of the application. Noise level is tested to Parker protocol P-105.

3. Life rating can vary depending on application and operating conditions.

4. Custom motor options available. Custom motors may require a significant application potential. The standard motors can be configured with a special winding to meet a particular operation point at a specified voltage

5. Current range is dependent on motor type, voltage, pressure/vacuum and flow requirement. Lower levels possible depending on application.

6. Inductance is an indicator of induced voltage with change in current and it is a key parameter to enable customers' low energy intrinsic safety systems

7. Maximum intermittent pressure/vacuum data is a pump capability guideline for applications that go beyond the maximum continuous levels for short periods of time. Please consult customer specific requirements with the factory or Applications Engineering.

8. Pump efficiency is a measure of the flow rate generated per unit of power consumed. Efficiency may change dependent on application and operating condition at free flow.

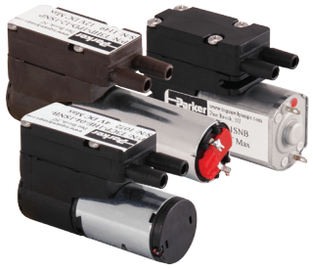
T2-03

Micro Diaphragm Pumps (air/gas)

Up to 2.5 LPM Free Flow



T2-03 micro diaphragm pump series is ideal for higher performance, fixed and portable air and gas detection, and medical applications requiring flow up to 2.5 lpm. T2-03 pumps are proven in fixed and portable applications for sampling of hazardous gases and vapors typical of industrial and mining operations.

Typical Applications

- Gas Sampling
- Fixed Gas Detectors
- Medical Instruments
- Aerosols and Particle Analysis
- Combustion Analyzers

Features

- The valve design has been optimized to provide the highest flow rates available with the lowest power draw in this package size. Lower power results in longer battery life and smaller instrument size.
- The wear components of these pumps have been designed to provide maximum life. Many applications for these pumps require 10,000+ hours of operation.
- The pumps fit into the extremely tight spaces demanded of today's handheld instruments, such as portable gas detectors and portable instruments such as handheld gas detectors and medical devices. The lightweight design minimizes instrument weight.
- RoHS compliant.

Electrical Integration and Motor Control

If application requires variable flow, motor control options are available, as follows:

PMDC Iron Core Brush Motor (eCompact)

2 Solder Tabs	Positive terminal marked on pump motor

Coreless Brush Motor (Compact & HP)

2 Wire	Red (+), Black (-)
Wire specification	28 AWG Wire lead length 5.7" (145 mm)

Electrical Integration and Motor Control cont'd

Key Things to Remember

5" (127 mm) flying Leads are the standard electrical connection method to the pump (eCompact standard connection is tabs). Contact Applications for other connection requirements.

The pump lead wires are non-polarized.

The pump can be controlled by DC voltage or PWM. The minimum recommended PWM frequency is 20kHz.

The pump flow and pressure can be controlled by adjusting the input voltage from zero to maximum rated voltage.

The pump is not a pressure holding device. An external check valve is recommended, if there is a pressure holding requirement.

Pump orientation does not affect performance or life.

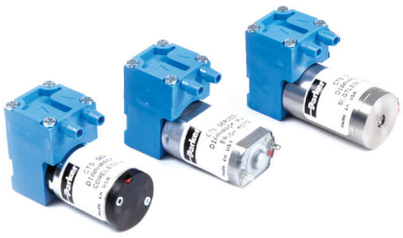
Notes

CTS Series

2.5 LPM Free Flow

Micro Diaphragm Pumps (air/gas)



Parker's CTS Micro Diaphragm Pump Model delivers up to 2.5 slpm of flow into a compact 20 mm wide package. Configurable with three different motors to meet your application's specific needs and life expectations

Typical Applications:

- Gas Analyzers
- Patient Monitoring
- CO_2 Monitors
- Compression Therapy
- Negative Pressure Wound Therapy
- Surgical Instruments
- Medical Consumer Devices

Features

- CTS Series Pumps set the highest benchmark for life-expectancy with our advanced proprietary diaphragm elastomer.
- CTS Series Pumps have a unique, compact, and lightweight design making it ideal for portable applications.
- Our 100% oil and grease-free pump and compressor design maintains the purity of your system and are commonly used in FDA-approved systems.
- CTS Series Pumps are uniquely balanced to minimize noise and vibration and to maximize life.
- RoHS compliant.

Wire specification	24AWG, Insulation OD 0.042 in (1.07 mm), 20" (508 mm) Wire Leads

Key Things to Remember

The pump is not a pressure holding device. An external check valve is recommended, if there is a pressure holding requirement.

Onboard PWM control is not provided with this pump.

Pump orientation does not affect performance or life.

Please click on the Order On-line button below (or go to www.parker.com/precisionfluidics/cts) to configure the CTS Miniature Diaphragm Pump for your application.

Serviceable – PPF products are designed for use through the rated life and Parker does not sell replacement parts, nor is it recommended to service these in the field

Note: In addition to Parker's innovative and flexible pump designs, we offer applications engineering expertise to our customers in order to configure and recommend the optimal pump for the application. Contact Parker Applications Engineering to discuss and configure alternate pump configurations to meet your specific application requirements. Providing information on the following requirements will assist us in developing an optimal solution for your application:

- Noise
- Operating Pressure / Vacuum
- Power Consumption
- Life Requirement
- Function in the Application
- Size
- Motor Control
- Media
- Voltage

Appendix A

All performance data is typical based on standard conditions: 70°F and 14.7 psia (21°C and 1 bar).

1. Duty Dependent. For operation above 122°F (50°C) consult factory
2. Noise is dependent on the configuration and operation of the pump in the application. Parker has the ability to tailor the pump configuration when noise is a critical criterion in the effort to meet the performance requirements of the application. Noise level is tested to Parker protocol P-105.
3. Life rating can vary depending on application and operating conditions.
4. Custom motor options available. Custom motors may require a significant application potential. The standard motors can be configured with a special winding to meet a particular operation point at a specified voltage
5. Current range is dependent on motor type, voltage, pressure/vacuum and flow requirement. Lower levels possible depending on application.
6. Pump efficiency is a measure of the flow rate generated per unit of power consumed. Efficiency may change dependent on application and operating condition at free flow.

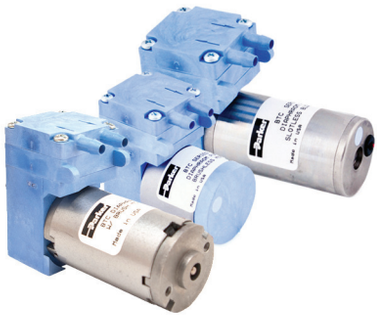
Notes

BTC Series

Up to 6 LPM Free Flow

Miniature Diaphragm Pumps (air/gas)



BTC Miniature Diaphragm Pumps are a series of brush and brushless DC motor driven pumps, which are tailored to meet specific application performance requirements. An innovative compact design incorporates leading edge technologies that allow them to operate more efficiently than existing pump designs. BTC Pumps offer multiple component configurations allowing them to be used for either vacuum, pressure, or alternating vacuum and pressure operations. BTC series is ideal for a wide range of pressures and low noise applications.

Typical Applications

- Gas Analysis
- Anesthesia Monitors
- CO_2 Monitors
- Patient Monitoring
- Wound Therapy
- Urinalysis
- Medical/Training Mannequin

Features

- Innovative and efficient engineering designs enable the BTC Series to push the performance envelope in a lightweight, compact size.
- Using our proprietary advanced diaphragm elastomer and superior brushless motor design sets the highest benchmark for service-free operation that exceeds 10,000 hours.
- Incorporating the lightweight EZ Mount Accessory facilitates simple system assembly while dampening vibration and reducing noise levels.
- RoHS compliant.

Product Specifications*

Physical Properties

Operating Environment[1]:
41 to 122°F (5 to 50°C)

Storage Environment:
-4 to 212°F (-20 to 100°C)

Media:
Air, Argon, Helium, Nitrogen, Oxygen, and other non-reacting gases

Humidity:
0% - 80% Relative Humidity

Noise Level[2]:
As low as 45 dB @ 12 in (30 cm)
Muffler recommended for additional noise reduction (see accessories)

Pump Assembly Rated Life[3]:
PMDC Iron Core Brush - 3,000 hrs
Brushless Slotted - 10,000 hrs
Brushless Slotless - 10,000 hrs

Weight:
6.5 oz. (184 g) PMDC Iron Core Brush
4.5 oz. (128 g) Brushless Slotted
7.4 oz. (210 g) Brushless Slotless

Electrical

Motor Type (DC):
PMDC Iron Core Brush,
Brushless Slotted, Brushless Slotless

Nominal Motor Voltages[4]:
6, 12, or 24 VDC
Other voltages available upon request

Electrical Termination:
PMDC Iron Core Brush: 22 AWG Wire Leads, Length 10" (254 mm)
Brushless Slotted Motor: 22 AWG Wire Leads, Length 20" (508 mm)
Brushless Slotless: 22 AWG Wire Leads Length 20" (508 mm)

Current Range[5]:
50 - 900 mA

Wetted Materials

Diaphragm:
EPDM, AEPDM, FKM

Valves:
EPDM, FKM

Pump Head:
Vectra (Liquid Crystal Polymer)

Pneumatic

Head Configuration:
Single

Maximum Unrestricted Flow:
Flow: 6 LPM

Pressure Range:
0 - 30 psig (0-1.93 bar) Flat
0 - 20 psig (0-1.38 bar) Convoluted

Vacuum Range:
0 - 23 in Hg (0-584 mm Hg) Flat
0 - 20 in Hg (0-508 mm Hg) Convoluted

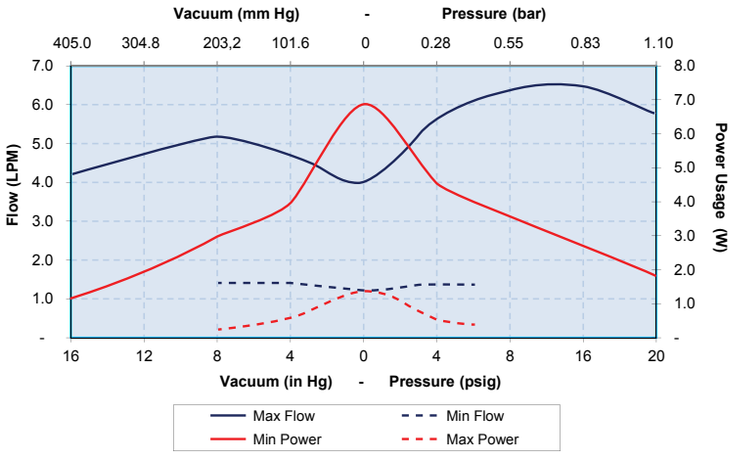
Filtration:
40 microns - recommended

Efficiency at Free Flow[6]:
PMDC Iron Core Brush:
1.2 LPM/Watt (*PN: C103E-13*)
Brushless Slotted:
1.4 LPM/Watt (*PN: C134D-13*)
Brushless Slotless:
1.5 LPM/Watt (*PN: C190-12*)

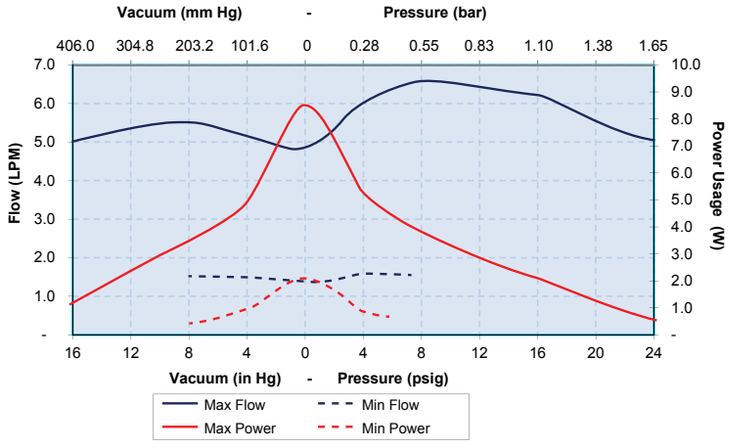
* See Appendix A for details.

Performance Specifications

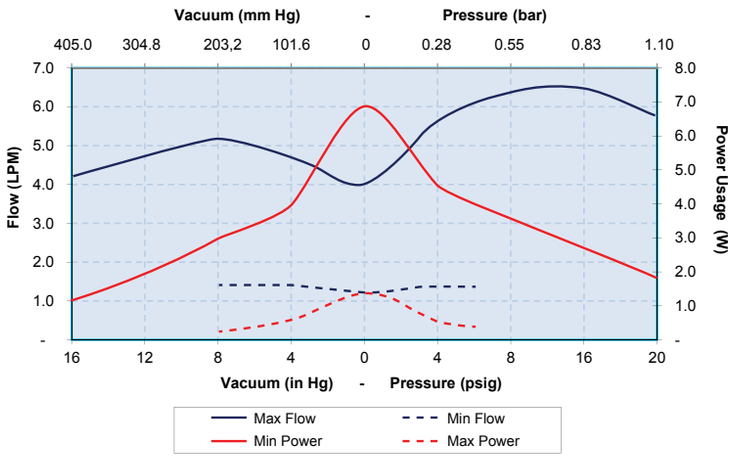
BTC - PMDC Iron Core Brush



BTC - Brushless Slotted Motor



BTC - Brushless Slotless Motor



The above graphs represent an example of performance for the pump series handling air at 800 feet (244 m) above sea level at 75 degree F (24 C). Performance will vary depending on barometric pressure and media temperature. A variety of configurations can be accommodated to meet application requirements. Curves are representative of standard pump configurations. Pump configurations could be customized for higher or lower flows depending on specific customer requirements.

Please contact Parker Precision Fluidics Applications Engineering for other considerations.

BTC Series

Miniature Diaphragm Pumps (air/gas)

Sizing and Selection

BTC Series	PMDC Iron Core Brush	Brushless Slotted Motor	Brushless Slotless Motor

	PMDC Iron Core Brush	Brushless Slotted Motor	Brushless Slotless Motor
Efficiency[1]	Good	**Better** - Up to 60% motor efficiency at low loads	**Best** - Up to 75% motor efficiency at high power levels
Life[2]	Good - 3,000 hrs	**Best** - 10,000 hrs	**Best** - 10,000 hrs
Cost	Best	Better	Premium
Noise	Good	Better	Best

Mounting Guidelines:

- Bracket options available for mounting consideration (*See EZ Mount catalog pages).*
- Hole in the center of the bottom of housing is for manufacturing only–not to be used for mounting.
- Mounting holes are drilled for #6-20 self-tapping screws with 1/4" (6 mm) thread engagement torque to 4 in-lbs (0.45 N-m).

Port Connections:

- Barbs are sized for 1/8" (3 mm) ID tubing, 70-80 durometer recommended.
- Flow direction is marked on the pump head with arrows.

2 Wire	Red (+), Black (-)
3 Wire (Speed Control)	Red (+), Black (-), White (PWM) or Yellow (Analog)
4 Wire (Speed Control & Feedback)	Red(+), Black (-), White (PWM) or Yellow (Analog), Blue (Tachometer)
Wire specification	22AWG, Insulation OD 0.051 in (1.30 mm), 20" (508 mm) Wire Leads

Other Motor Control Considerations

The drive electronics for the BLDC motors are integrated into the motor itself, all that is needed is a power supply with the sufficient voltage and current.

Key Things to Remember

The pump is not a pressure holding device. An external check valve is recommended, if there is a pressure holding requirement.

Pump orientation does not affect performance or life.

Pulse Width Modulation (PWM)

Pulse-width modulation is a commonly used technique for controlling DC motors.

The average value of the voltage fed to the motor is controlled by turning a switch between the voltage supply and the motor on-and-off at a fast pace. The longer the switch is on compared to the off time, the higher the power supplied to the motor.

The PWM switching frequency varies for different types of devices, and is selected based on how it affects the device. For example, some applications require a faster switching frequency to prevent audible noise or electrical noise.

The term duty cycle describes the ratio of on-time to the period (one complete on-and-off cycle). Duty cycle is normally expressed as a percentage of on-time, 100% being full-power and 50% being half-power.

The advantage of PWM is the reduction of power-loss due to switching versus other control methods. Parker Hannifin recommends controlling the pump using 15kHz - 20 kHz frequency range.

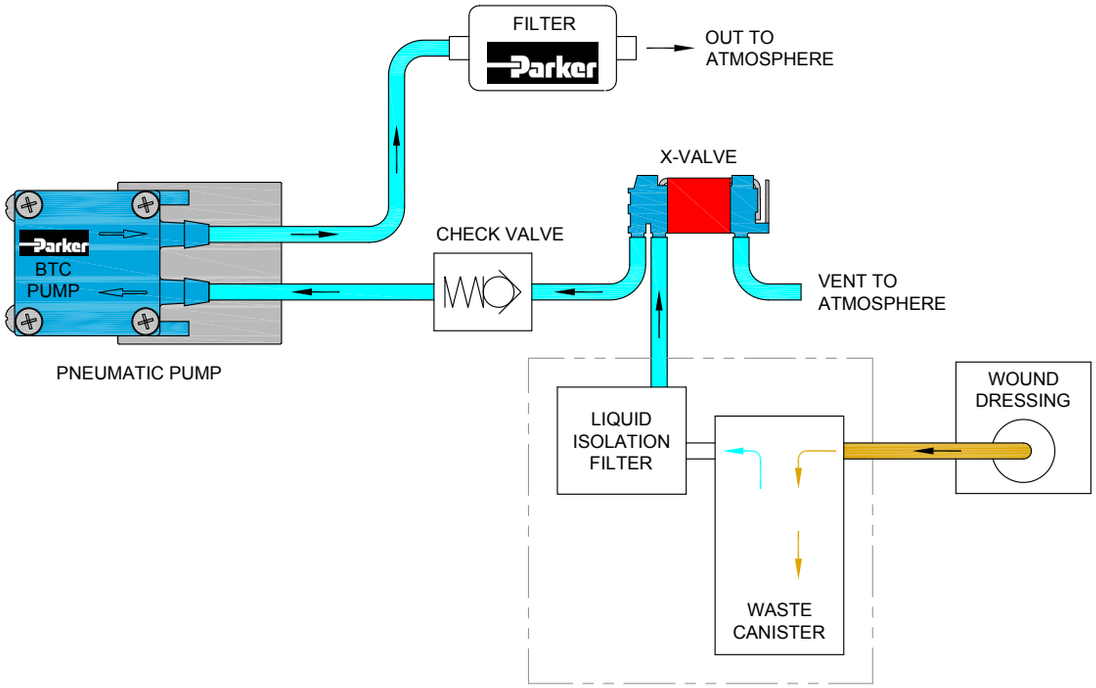
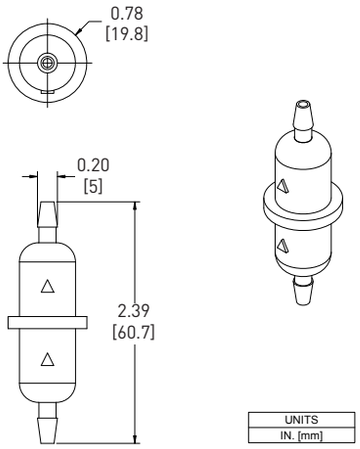
Negative Pressure Wound Therapy



Ordering Information

Filter-Mufflers also available to assist with filtration and optimize noise reduction.

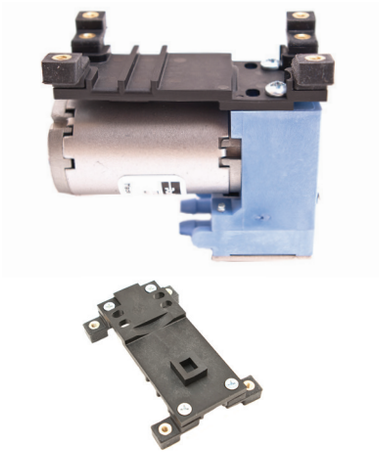
Part Number: 00492-15
(Filters to 10 microns)



BTC Series Miniature Diaphragm Pumps (air/gas)

Accessory Information

EZ Mount available



EZ Mount provides ease of installation and effective control of vibration transfer. EZ Mount was designed to mount easily to the Precision Fluidic BTC Family of diaphragm pumps.

Features

- Isolation feet on the EZ mount can be rotated in any one of three ninety-degree planes and is designed for top-down or bottom-up mounting providing simple installation.
- EZ Mount was designed to minimize weight added to the pump assembly. Approximate weights are: Style A - 0.63 oz (18 g), Style B - 0.71 oz (20 g).
- Effectively absorbs vibration to minimize most vibration-induced noise and vibration transfer into an instrument.
- Designed to keep height and size to a minimum.
- Engineered for Parker BTC pumps to ease integration into your system.

Physical Properties

Operating Environment:
41 - 158°F (5 - 70°C)
Humidity:
0 - 95% Relative Humidity
Base Plate:
Noryl GTX830
Feet:
Silicone
Feet Insert:
Brass
Hardware:
Zinc-Plated Steel

EZ Mount kits include all necessary hardware and detailed instructions.

Isolation Feet are available in either threaded or thru-hole clearance for standard #4-40 or #6-32 (M3 for clearance hole only) hardware and can be mounted in any of three ninety-degree planes.

Ordering Information

Please click on the Order On-line button below (or go to www.parker.com/precisionfluidics/btc) to configure the BTC-II Miniature Diaphragm Pump for your application.

Serviceable – PPF products are designed for use through the rated life and Parker does not sell replacement parts, nor is it recommended to service these in the field

Note: In addition to Parker's innovative and flexible pump designs, we offer applications engineering expertise to our customers in order to configure and recommend the optimal pump for the application. Contact Parker Applications Engineering to discuss and configure alternate pump configurations to meet your specific application requirements. Providing information on the following requirements will assist us in developing an optimal solution for your application:

- Noise
- Operating Pressure / Vacuum
- Power Consumption
- Life Requirement
- Function in the Application
- Size
- Motor Control
- Media
- Voltage

Appendix A

All performance data is typical based on standard conditions: 70°F and 14.7 psia (21°C and 1 bar).

1. Duty Dependent. For operation above 122°F (50°C) consult factory
2. Noise is dependent on the configuration and operation of the pump in the application. Parker has the ability to tailor the pump configuration when noise is a critical criterion in the effort to meet the performance requirements of the application. Noise level is tested to Parker protocol P-105.
3. Life rating can vary depending on application and operating conditions.
4. Custom motor options available. Custom motors may require a significant application potential. The standard motors can be configured with a special winding to meet a particular operation point at a specified voltage
5. Current range is dependent on motor type, voltage, pressure/vacuum and flow requirement. Lower levels possible depending on application.
6. Pump efficiency is a measure of the flow rate generated per unit of power consumed. Efficiency may change dependent on application and operating condition at free flow.

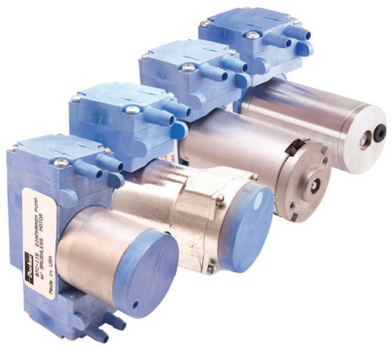
BTC-IIS Series

Miniature Diaphragm Pumps (air/gas)

Up to 11 LPM Free Flow



BTC-IIS Miniature Diaphragm Pumps are a series of brush and brushless DC motor driven pumps which are tailored to meet the specific application performance requirements. The innovative compact designs incorporate leading edge technologies that allow them to operate more efficiently than existing pump designs. BTC-IIS Pumps offer multiple component configurations allowing them to be used for either vacuum, pressure, or alternating vacuum and pressure operations. BTC-IIS is ideal for compact, high flow, wide pressure ranges, long-life, low noise applications.

Typical Applications

- Patient Monitoring
- Compression Therapy
- Hemodialysis
- Peritoneal Dialysis
- Respiratory Care
- Wound Therapy
- Medical/Training Mannequins
- Degassing

Features

- The BTC-IIS Series pump sets the highest benchmark for service-free performance with our unique brushless DC motor design and advanced proprietary diaphragm elastomer.
- Incorporating the lightweight EZ Mount accessory facilitates simple system assembly while dampening vibration and reducing noise levels.
- The BTC-IIS maximizes flexibility by offering several mount options,
- Our 100% oil and grease-free pump and compressor design maintains the purity of your system and are commonly used in FDA-approved systems.
- RoHS compliant.

Product Specifications

Physical Properties

Operating Environment[1]:
41 to 122°F (5 to 50°C)

Storage Environment:
-4 to 212°F (-20 to 100°C)

Media:
Air, Argon, Helium, Nitrogen, Oxygen, and other non-reacting gases

Humidity:
0 – 80% Relative Humidity

Noise Level[2]:
As low as 45 dB @ 12 in (30 cm)
Muffler recommended for additional noise reduction (see accessories)

Pump Assembly Rated Life[3]:
PMDC Iron Core Brush - 3,000 hrs
Brushless Slotted - 10,000 hrs
Brushless Slotted (High Torque) - 10,000 hrs
Brushless Slotless - 10,000 hrs

Weight:
8.0 oz. (227 g) PMDC Iron Core Brush
6.0 oz. (170 g) Brushless Slotted
11.6 oz. (330 g) Brushless Slotted (High Torque)
8.8 oz. (250 g) Brushless Slotless

Electrical

Motor Type (DC):
PMDC Iron Core Brush, Brushless Slotted (High Torque), Brushless Slotless

Nominal Motor Voltages[4]:
6, 12, or 24 VDC
Other voltages available upon request

Electrical Termination:
PMDC Iron Core Brush: 22 AWG Wire Leads, Length 10” (254 mm)
Brushless Slotted Motor: 22 AWG Wire Leads, Length 20” (508 mm)
Brushless Slotted Motor (High Torque): 22 AWG Wire Leads, Length 20” (508 mm)
Brushless Slotless: 22 AWG Wire Leads, Length 20” (508 mm)

Current Range[5]:
200 - 1400 mA

Wetted Materials

Diaphragm:
EPDM, AEPDM, FKM

Valves:
EPDM, FKM

Pump Head:
Vectra (Liquid Crystal Polymer)

Pneumatic

Head Configuration:
Dual

Maximum Unrestricted Flow:
6 LPM (Series)
11 LPM (Parallel)

Pressure Range:
0 - 48 psig (0 - 3.31 bar) Series
0 - 28 psig (0 - 1.93 bar) Parallel

Vacuum Range:
0 - 25 in Hg (635 mm Hg) (Series)
0 - 20 in Hg (580 mm Hg) (Parallel)

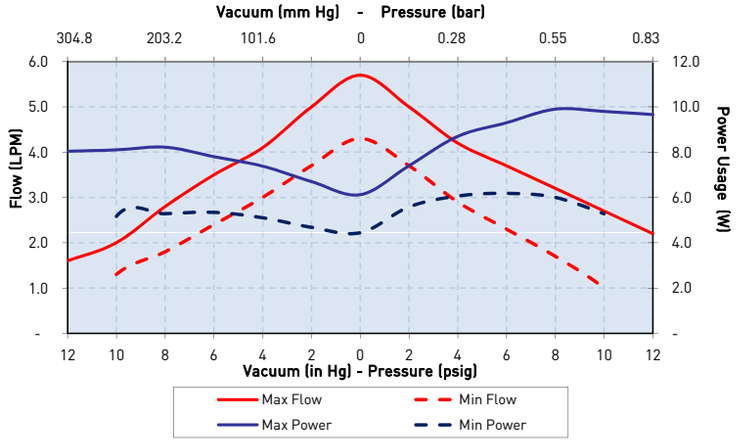
Filtration:
40 microns - recommended

Efficiency at Free Flow[6]
PMDC Iron Core Brush:
0.9LPM/Watt (*PN: D743-21-01*)
Brushless Slotted:
1.1LPM/Watt (*PN: D713-21-01*)
Brushless Slotted:
1.0LPM/Watt (*PN: D737-23-01*)
Brushless Slotless:
1.3LPM/Watt (*PN: D1019-22-01*)

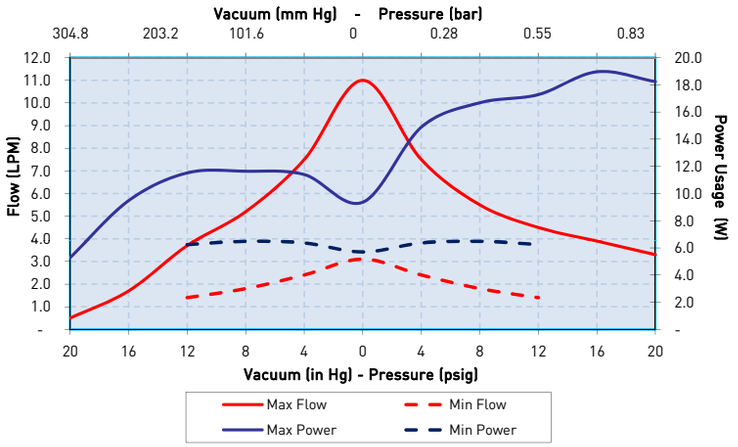
* See Appendix A for details.

Performance Specifications

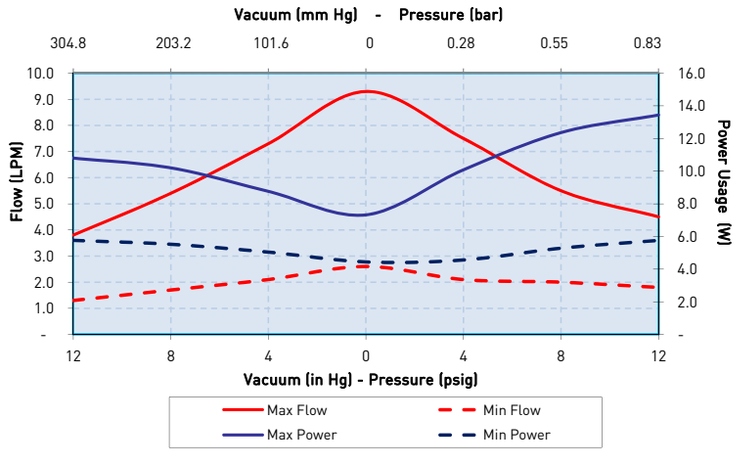
BTC-IIS - PMDC Iron Core Brush Motor



BTC-IIS - Brushless Slotted Motor



BTC-IIS - Brushless Slotless Motor



The above graph represents an example of performance for the pumps series handling air at 800 feet (244m) above sea level at 75°F (24°C). Performance will vary depending on barometric pressure and media temperature. Curves are representative of standard pump configurations. Pump configurations could be customized for higher or lower flows, depending on specific customer requirements.

Please contact Parker Precision Fluidics Applications Engineering for other considerations.

BTC-IIS Series

Miniature Diaphragm Pumps (air/gas)

Sizing and Selection

BTC-IIS Series	PMDC Iron Core Brush	Brushless Slotted Motor	Brushless Slotted Motor (High Torque)	Brushless Slotless Motor
				
	PMDC Iron Core Brush	**Brushless Slotted**	**Brushless Slotted (High Torque)**	**Brushless Slotless**
Efficiency[8]	Good	**Better** - Up to 60% motor efficiency at low loads	**Better** - up to 60% motor efficiency at high power levels with high torque capability	**Best** - Up to 75% motor efficiency at high power levels
Life[10]	Good - 3,000 hrs	**Best** - 10,000 hrs	**Best** - 10,000 hrs	**Best** - 10,000 hrs
Cost	Best	Better	Good	Premium
Noise	Good	Better	Best	Best

Mounting Guidelines:

- Bracket options available for mounting consideration (*See EZ Mount catalog pages).*
- Hole in the center of the bottom of housing is for manufacturing only–not to be used for mounting.
- Mounting holes are drilled for #6-20 self-tapping screws with 1/4" (6 mm) thread engagement torque to 4 in-lbs. (0.45 N-m).

Port Connections:

- Barbs are sized for 1/8" (3 mm) ID tubing, 70-80 durometer recommended.
- Flow direction is marked on the pump head with arrows.

2 Wire	Red (+), Black (-)
3 Wire (Speed Control)	Red (+), Black (-), White (PWM) or Yellow (Analog)
4 Wire (Speed Control & Feedback)	Red(+), Black (-), White (PWM) or Yellow (Analog), Blue (Tachometer)
Wire specification	22AWG, Insulation OD 0.051 in (1.30 mm), 20" (508 mm) Wire Leads

Other Motor Control Considerations

The drive electronics for the BLDC motors are integrated into the motor itself, all that is needed is a power supply with the sufficient voltage and current.

Key Things to Remember

The pump is not a pressure holding device. An external check valve is recommended, if there is a pressure holding requirement.

Pump orientation does not affect performance or life.

Pulse Width Modulation (PWM)

Pulse-width modulation is a commonly used technique for controlling DC motors.

The average value of the voltage fed to the motor is controlled by turning a switch between the voltage supply and the motor on-and-off at a fast pace. The longer the switch is on compared to the off time, the higher the power supplied to the motor.

The PWM switching frequency varies for different types of devices, and is selected based on how it affects the device. For example, some applications require a faster switching frequency to prevent audible noise or electrical noise.

The term duty cycle describes the ratio of on-time to the period (one complete on-and-off cycle). Duty cycle is normally expressed as a percentage of on-time, 100% being full-power and 50% being half-power.

The advantage of PWM is the reduction of power-loss due to switching versus other control methods. Parker Hannifin recommends controlling the pump using 15kHz - 20 kHz frequency range.

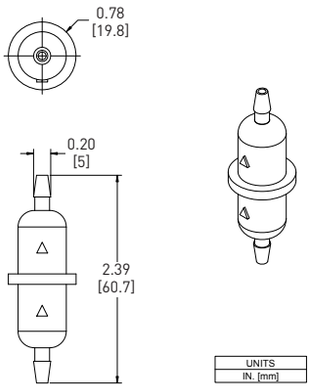
Accessory Information

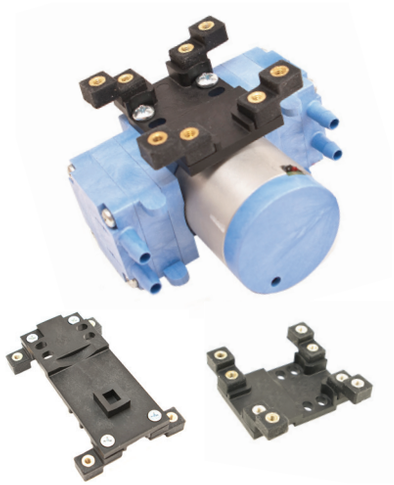
Filter-Mufflers also available to assist with filtration and optimize noise reduction.

Part Number: 00492-15
(Filters to 10 microns)



Accessory Information

EZ Mount available



EZ Mount provides ease of installation and effective control of vibration transfer. EZ Mount was designed to mount easily to the Precision Fluidic BTC-IIS Family of diaphragm pumps.

Features

- Isolation feet on the EZ mount can be rotated in any one of three ninety-degree planes and is designed for top-down or bottom-up mounting providing simple installation.
- EZ Mount was designed to minimize weight added to the pump assembly. Approximate weights are: Style A - 0.63 oz (18 g), Style B - 0.71 oz (20 g).
- Effectively absorbs vibration to minimize most vibration-induced noise and vibration transfer into an instrument.
- Designed to keep height and size to a minimum.
- Engineered for Parker BTC-IIS pumps to ease integration into your system.

Physical Properties

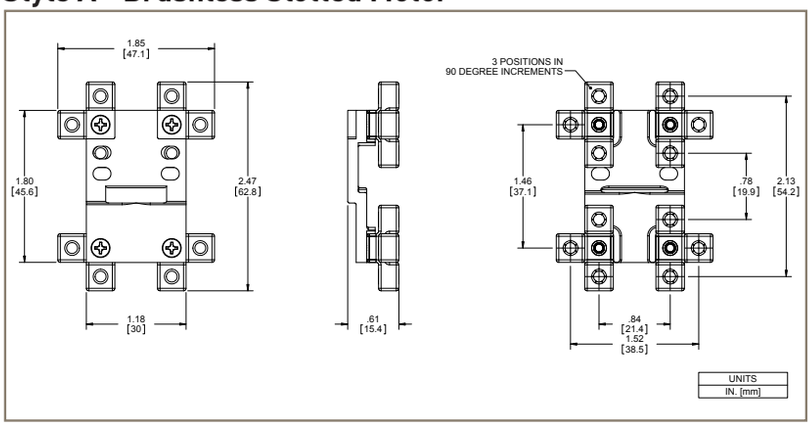
Operating Environment:
41 - 158°F (5 - 70°C)
Humidity:
0 - 95% Relative Humidity
Base Plate:
Noryl GTX830
Feet:
Silicone
Feet Insert:
Brass
Hardware:
Zinc-Plated Steel

EZ Mount kits include all necessary hardware and detailed instructions.

Isolation Feet are available in either threaded or thru-hole clearance for standard #4-40 or #6-32 (M3 for clearance hole only) hardware and can be mounted in any of three ninety-degree planes.

Dimensions

Style A - Brushless Slotted Motor



Style B - PMDC Iron Core Brush Motor

Miniature Diaphragm Pumps (air/gas)

Chemical Compatibility Chart*

	Chemical Compatibility of Wetted Path Materials			
Chemical	**FKM**	**EPDM**	**AEPDM**	**Vectra A130**
Air	1	1	1	1
Ozone (1000 ppm)	4	4	4	2
Oxygen	1	1	1	1
Ethylene (Ethene)	1	4	1	3
Acetylene	1	1	1	1
Propane	1	4	4	1
Methane	1	4	4	1
Nitrogen	1	1	1	1
Carbon Dioxide	1	2	2	1
Halothane (Up to 5%)	1	4	4	1

*The above is an Abbreviated Chemical Compatibility Chart. Please consult factory for details.

Compatibility Legend

1. EXCELLENT
   Minimal or no effect
2. GOOD
   Possible swelling and/or loss of physical properties
3. DOUBTFUL
   Moderate or severe swelling and loss of physical properties
4. NOT RECOMMENDED
   Severe effect and should not be considered

Note: Consult factory for other gases.

Please click on the Order On-line button below (or go to www.parker.com/precisionfluidics/btciis) to configure the BTC-IIS Miniature Diaphragm Pump for your application.

Serviceable – PPF products are designed for use through the rated life and Parker does not sell replacement parts, nor is it recommended to service these in the field

Note: In addition to Parker's innovative and flexible pump designs, we offer applications engineering expertise to our customers in order to configure and recommend the optimal pump for the application. Contact Parker Applications Engineering to discuss and configure alternate pump configurations to meet your specific application requirements. Providing information on the following requirements will assist us in developing an optimal solution for your application:

- Noise
- Operating Pressure / Vacuum
- Power Consumption
- Life Requirement
- Description of pump function in the application
- Size
- Motor Control
- Media
- Voltage

Appendix A

All performance data is typical based on standard conditions: 70°F and 14.7 psia (21°C and 1 bar).

1. Duty Dependent. For operation above 122°F (50°C) consult factory
2. Noise is dependent on the configuration and operation of the pump in the application. Parker has the ability to tailor the pump configuration when noise is a critical criterion in the effort to meet the performance requirements of the application. Noise level is tested to Parker protocol P-105.
3. Life rating can vary depending on application and operating conditions.
4. Custom motor options available. Custom motors may require a significant application potential. The standard motors can be configured with a special winding to meet a particular operation point at a specified voltage
5. Current range is dependent on motor type, voltage, pressure/vacuum and flow requirement. Lower levels possible depending on application.
6. Pump efficiency is a measure of the flow rate generated per unit of power consumed. Efficiency may change dependent on application and operating condition at free flow.

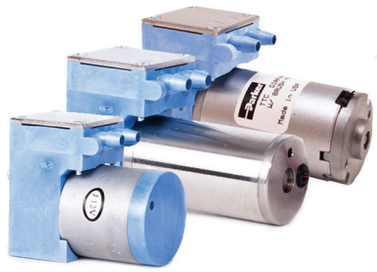
TTC Series

Up to 6 LPM Free Flow

Miniature Diaphragm Pumps (air/gas)



TTC Miniature Diaphragm Pumps are a series of brush and brushless DC motor driven pumps, which are tailored to meet specific application performance requirements. An innovative compact design incorporates leading edge technologies that allow them to operate more efficiently than existing pump designs. TTC Pumps offer multiple component configurations for use in either vacuum, pressure, or alternating vacuum and pressure operations. TTC Series is best for compact and low pressure applications that require high efficiency.

Typical Applications

- Gas Analysis
- Anesthesia Monitors
- Compression Therapy
- CO_2 Monitors
- Wound Therapy
- Trace Detection
- Medical/Training Mannequins
- Degassing

Features:

- TTC Series' innovative and efficient design pushes the performance envelope in a lightweight, compact size which allows it to operate at the highest performance/size ratio.
- Highest efficiency in class. The TTC supports low power for portable and battery powered instruments.
- Using our proprietary advanced diaphragm elastomer and superior brushless motor design sets the highest benchmark for service-free operation that exceeds 10,000 hours.
- Incorporating the lightweight EZ Mount accessory facilitates simple system assembly while dampening vibration and reducing noise levels.
- RoHS compliant.

Product Specifications*

Physical Properties

Operating Environment[1]:
41 to 122°F (5 to 50°C)
Storage Environment:
-4 to 212°F (-20 to 100°C)
Media:
Air, Argon, Helium, Nitrogen, Oxygen, and other non-reacting gases
Humidity:
0 – 80% Realtive Humidity
Noise Level[2]:
As low as 45 dB @ 12 in (30 cm)
Muffler recommended for additional noise reduction (see accessories)
Pump Assembly Rated Life[3]:
PMDC Iron Core Brush - 3,000 hrs Brushless Slotted - 10,000 hrs Brushless Slotless - 10,000 hrs
Weight:
7.2 oz. (206 g) PMDC Iron Core Brush 5.0 oz. (142 g) Brushless Slotted 7.7 oz. (218 g) Brushless Slotless

Electrical

Motor Type (DC):
PMDC Iron Core Brush, Brushless Slotted, Brushless Slotless
Nominal Motor Voltages[4]:
6, 12, or 24 VDC *Other voltages available upon request*
Electrical Termination:
PMDC Iron Core Brush - 22 AWG Wire Leads, Length 10" (254 mm)
Brushless Slotted Motor - 22 AWG Wire Leads, Length 20" (508 mm)
Brushless Slotless - 22 AWG Wire Leads, Length 20" (508 mm)
Current Range[5]:
300-800 mA

Pneumatic

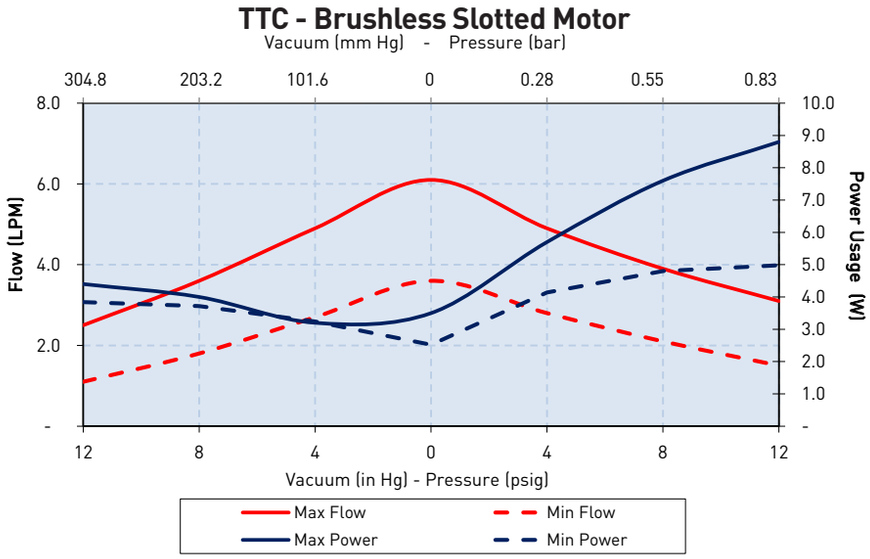
Head Configuration:
Single
Maximum Unrestricted Flow:
6 LPM
Pressure Range:
0 - 10 psig (0 - 0.7 bar)
Vacuum Range:
0 - 16 in Hg (0 - 406 mm Hg)
Filtration:
40 microns - recommended
Efficiency at Free Flow[6]
PMDC Iron Core Brush: 0.8 LPM/Watt (*PN: TS008-13*) Brushless Slotted: 1.4 LPM/Watt (*PN: TS003-11*) Brushless Slotless: 1.8 LPM/Watt (*PN: TS001-13*)

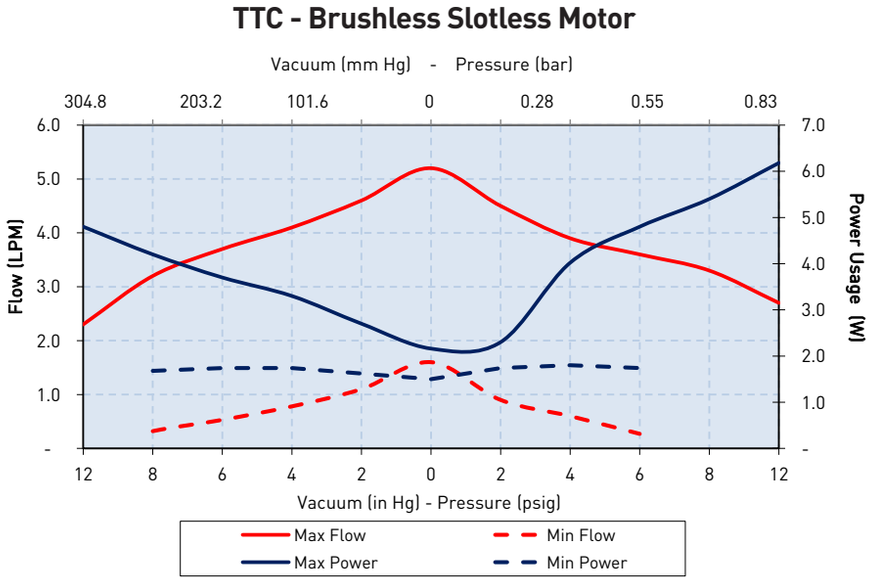
Wetted Materials

Diaphragm:	**Pump Head:**
EPDM, AEPDM, FKM	Vectra (Liquid Crystal Polymer)
Valves & Gaskets:	**Valve Cover:**
EPDM, FKM	303 Stainless Steel

* See Appendix A for details.

Performance Specifications





The above graph represents an example of performance for the pumps series handling air at 800 feet (244m) above sea level at 75°F (24°C). Performance will vary depending on barometric pressure and media temperature. Curves are representative of standard pump configurations. Pump configurations could be customized for higher or lower flows, depending on specific customer requirements.

Please contact Parker Precision Fluidics Applications Engineering for other considerations.

TTC Series Miniature Diaphragm Pumps (air/gas)

Sizing and Selection continued

TTC Series	PMDC Iron Core Brush	Brushless Slotted Motor	Brushless Slotless Motor
				PMDC Iron Core Brush	**Brushless Slotted Motor**	**Brushless Slotless Motor**
Efficiency[1]	Good	**Better** - Up to 60% motor efficiency at low loads	**Best** Up to 75% motor efficiency
Life[2]	Good - 3,000 hrs	**Best** - 10,000 hrs	**Best** - 10,000 hrs
Cost	Best	Better	Premium
Noise	Good	Better	Best

Mounting Guidelines:

- Bracket options available for mounting consideration (*See EZ Mount catalog pages).*
- Hole in the center of the bottom of housing is for manufacturing only–not to be used for mounting.
- Mounting holes are drilled for #6-20 self-tapping screws with 1/4" (6 mm) thread engagement, torque to 4 in-lbs (0.45 N-m).

Port Connections:

- Barbs are sized for 1/8" (3 mm) ID tubing, 70-80 durometer recommended.
- Flow direction is marked on the pump head with arrows.

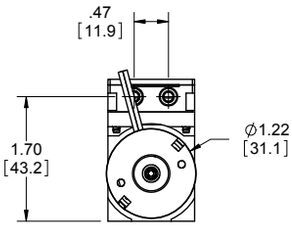
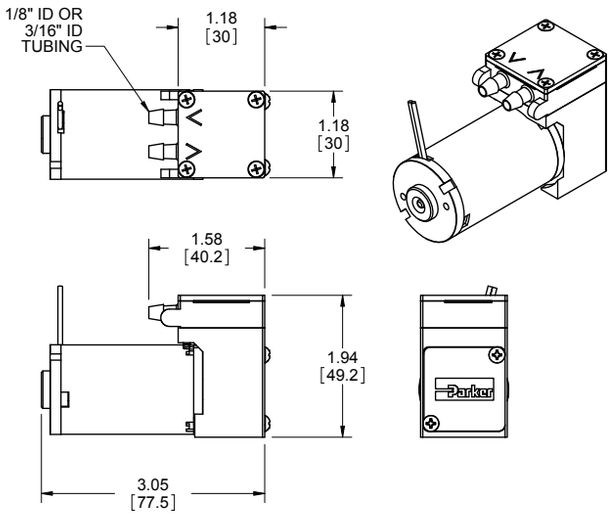
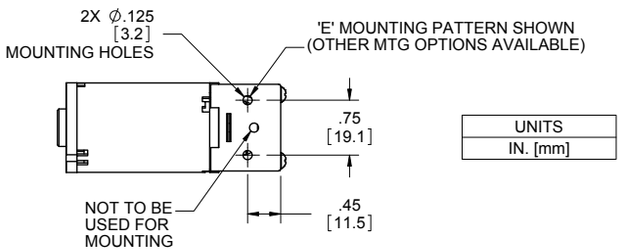
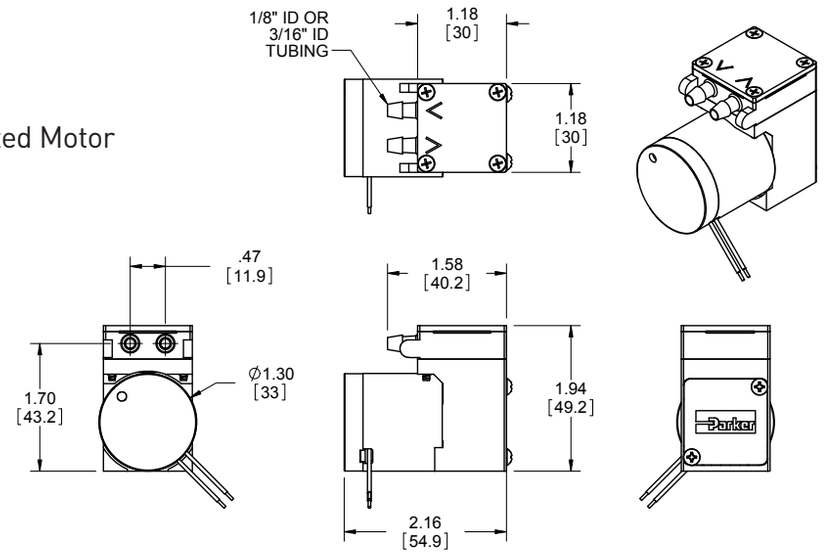
PMDC Iron Core Brush

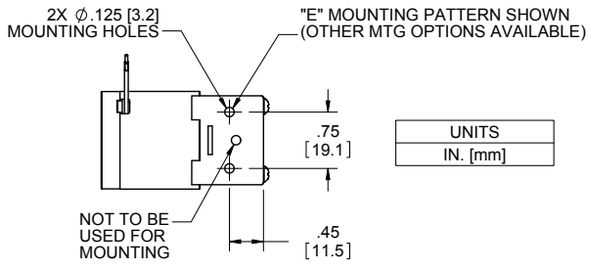




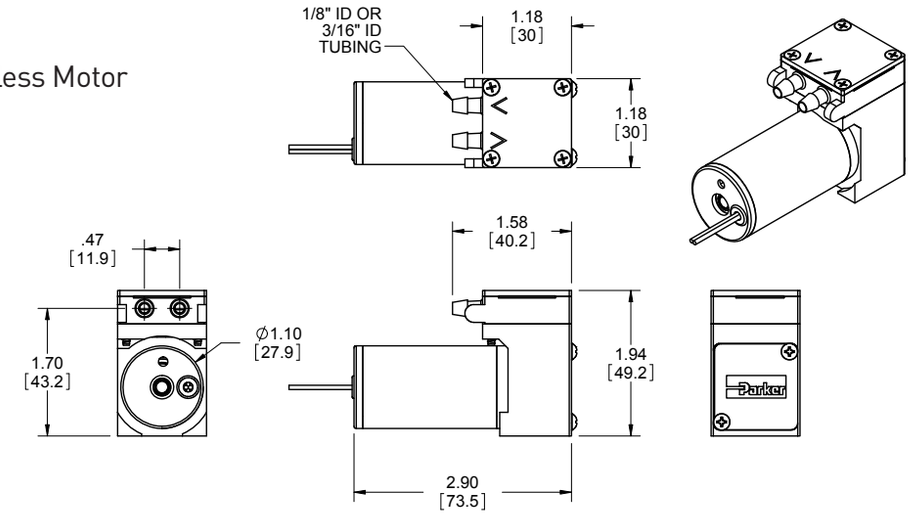


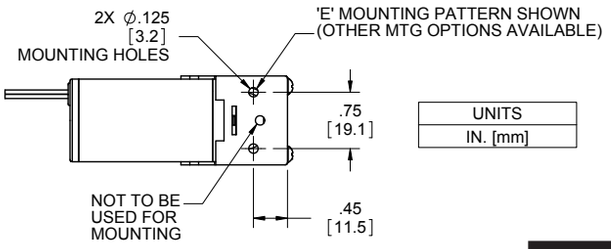
Brushless Slotted Motor





Brushless Slotless Motor





Electrical Integration and Motor Control

PMDC Iron Core Brush Motor

2 Wire	Red (+), Black (-)
Wire specification	22 AWG, Insulation OD 0.051 in (1.30 mm), 10" (254 mm) Wire Leads

Brushless Motor Control Options

2 Wire	Red (+), Black (-)
3 Wire (Speed Control)	Red (+), Black (-), White (PWM) or Yellow (Analog)
4 Wire (Speed Control & Feedback)	Red(+), Black (-), White (PWM) or Yellow (Analog), Blue (Tachometer)
Wire specification	22 AWG, Insulation OD 0.051 in (1.30 mm), 20" (508 mm) Wire Leads

Other Motor Control Considerations

The drive electronics for the BLDC motors are integrated into the motor itself, all that is needed is a power supply with the sufficient voltage and current.

Key Things to Remember

The pump is not a pressure holding device. An external check valve is recommended, if there is a pressure holding requirement.

Pump orientation does not affect performance or life.

Pulse Width Modulation (PWM)

Pulse-width modulation is a commonly used technique for controlling DC motors.

The average value of the voltage fed to the motor is controlled by turning a switch between the voltage supply and the motor on-and-off at a fast pace. The longer the switch is on compared to the off time, the higher the power supplied to the motor.

The PWM switching frequency varies for different types of devices, and is selected based on how it affects the device. For example, some applications require a faster switching frequency to prevent audible noise or electrical noise.

The term duty cycle describes the ratio of on-time to the period (one complete on-and-off cycle). Duty cycle is normally expressed as a percentage of on-time, 100% being full-power and 50% being half-power.

The advantage of PWM is the reduction of power-loss due to switching versus other control methods. Parker Hannifin recommends controlling the pump using 15kHz - 20 kHz frequency range.

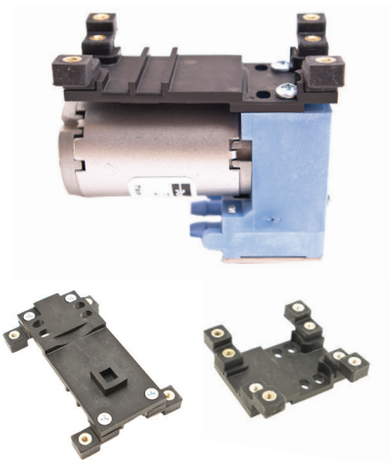
TTC Series Miniature Diaphragm Pumps (air/gas)

Accessory Information

EZ Mount available



EZ Mount provides ease of installation and effective control of vibration transfer. EZ Mount was designed to mount easily to the Precision Fluidic TTC Family of diaphragm pumps.

Features

- Isolation feet on the EZ mount can be rotated in any one of three ninety-degree planes and is designed for top-down or bottom-up mounting providing simple installation.
- EZ Mount was designed to minimize weight added to the pump assembly. Approximate weights are: Style A - 0.63 oz (18 g), Style B - 0.71 oz (20 g).
- Effectively absorbs vibration to minimize most vibration-induced noise and vibration transfer into an instrument.
- Designed to keep height and size to a minimum.
- Engineered for Parker TTC pumps to ease integration into your system.

Please click on the Order On-line button below (or go to www.parker.com/precisionfluidics/ttciis) to configure the TTC-IIS Miniature Diaphragm Pump for your application.

Serviceable – PPF products are designed for use through the rated life and Parker does not sell replacement parts, nor is it recommended to service these in the field

Note: In addition to Parker's innovative and flexible pump designs, we offer applications engineering expertise to our customers in order to configure and recommend the optimal pump for the application. Contact Parker Applications Engineering to discuss and configure alternate pump configurations to meet your specific application requirements. Providing information on the following requirements will assist us in developing an optimal solution for your application:

- Noise
- Operating Pressure / Vacuum
- Power Consumption
- Life Requirement
- Description of pump function in the application
- Size
- Motor Control
- Media
- Voltage

Appendix A

All performance data is typical based on standard conditions: 70°F and 14.7 psia (21°C and 1 bar).

1. Duty Dependent. For operation above 122°F (50°C) consult factory
2. Noise is dependent on the configuration and operation of the pump in the application. Parker has the ability to tailor the pump configuration when noise is a critical criterion in the effort to meet the performance requirements of the application. Noise level is tested to Parker protocol P-105.
3. Life rating can vary depending on application and operating conditions.
4. Custom motor options available. Custom motors may require a significant application potential. The standard motors can be configured with a special winding to meet a particular operation point at a specified voltage
5. Current range is dependent on motor type, voltage, pressure/vacuum and flow requirement. Lower levels possible depending on application.
6. Pump efficiency is a measure of the flow rate generated per unit of power consumed. Efficiency may change dependent on application and operating condition at free flow.

T2-04

Up to 7.0 LPM Free Flow

Micro Diaphragm Pumps (air/gas)

The T2-04 is a high flow and ultra compact pump that is ideal for portable air and gas detection applications. Delivering flow up to 7.0 lpm, the pump works well in environments where high efficiency for extended battery life, high performance, low cost, minimal weight, and compact size are critical.

Features

- The pump with patented valve design is optimized to provide best-in-class efficiency/size ratio especially for low vacuum applications. Low power consumption enables longer battery life for small instruments.
- The pump fits into the tight spaces demanded of today's battery-powered instruments. The lightweight design keeps the instrument weight minimized.
- The high efficiency coreless brush motor can satisfy intrinsic safety requirements. It has been proven in applications for sampling of medical gases, hazardous gases, particles, and aerosols in a range of fixed and portable instruments.
- Compact dual head design with internal flow paths that require only one set of barbs for intake and discharge simplifies plumbing requirements
- RoHS Compliant

Typical Applications

- Particle Detection
- Pathogen Detection
- Compression Therapy
- Wound Therapy
- Fuel Cell

Product Specifications*

Physical Properties

Operating Environment[1]:
32 to 122°F (0 to 50°C)
Storage Temperature:
14 to 122°F (-10 to 50°C)
Media:
Air, Argon, Helium, Nitrogen, Oxygen, and other non-reacting gases
Humidity:
5-95% Relative Humidity
Noise Level[2]:
As low as 45dB
Pump Assembly Rated Life[3]:
Up to 5,000 hrs
Weight:
3.3 oz (94 g)

Electrical

Motor Type:
High Efficiency Coreless Brush
Nominal Motor Voltages[4]:
6 VDC
Max Power at Nominal Voltage:
0.36 Watts
Electrical Termination:
28 AWG Wire Leads lead length 5" (127 mm)
Current Range[5]:
50 - 900 mA
Inductance[6]:
Coreless Brush: 0.266 mH max @ 1kHz/50mV

Pneumatic

Head Configuration:
Dual (Single Ported)
Maximum Flow:
7.0 lpm
Maximum Intermittent Pressure[7]:
11.9 psi (820 mbar)
Maximum Continuous Pressure:
2 psi (138 mbar)
Maximum Intermittent Vacuum[7]:
17.6 in Hg (596 mbar)
Maximum Continuous Vacuum:
4 in Hg (138 mbar)
Filtration:
40 micron recommended
Efficiency at Free Flow[8]:
Coreless Brush Motor: 8.9 LPM/Watt *(P/N: T4-2HE-06-1SNA)*

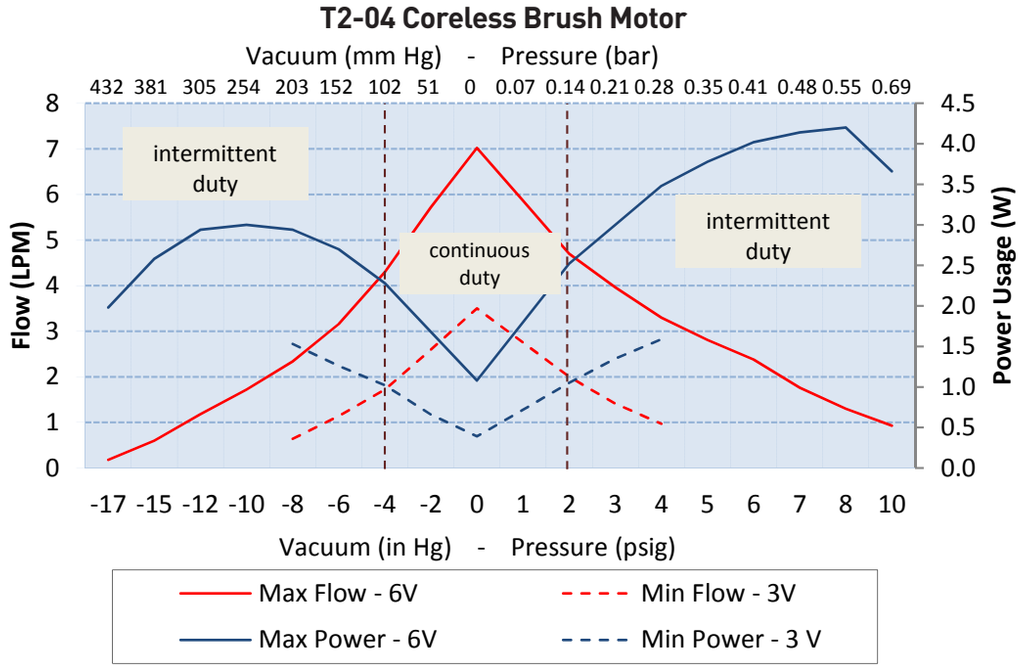
Wetted Materials

Diaphragm:	**Pump Head:**
Neoprene Rubber	Polyphthalamide (PPA)
Valves:	
Silicone	

* See Appendix A for details.

T2-04 Micro Diaphragm Pumps (air/gas)

Typical Flow Curve



The above graphs represent examples of performance for the pumps series handling air at 800 feet (244M) above sea level at 75° F (24° C). Performance will vary depending on barometric pressure and media temperature.

Curves are representative of standard pump configurations. Pump configurations could be customized for higher or lower flows, depending on specific customer requirements.

Please contact Parker Precision Fluidics Applications Engineering for other considerations

Sizing and Selection

T2-04 Series Coreless Brush Motor

Mounting Guidelines:

- Parker recommends using a nylon cable tie with a length of at least 4" (100 mm).

Port Connections:

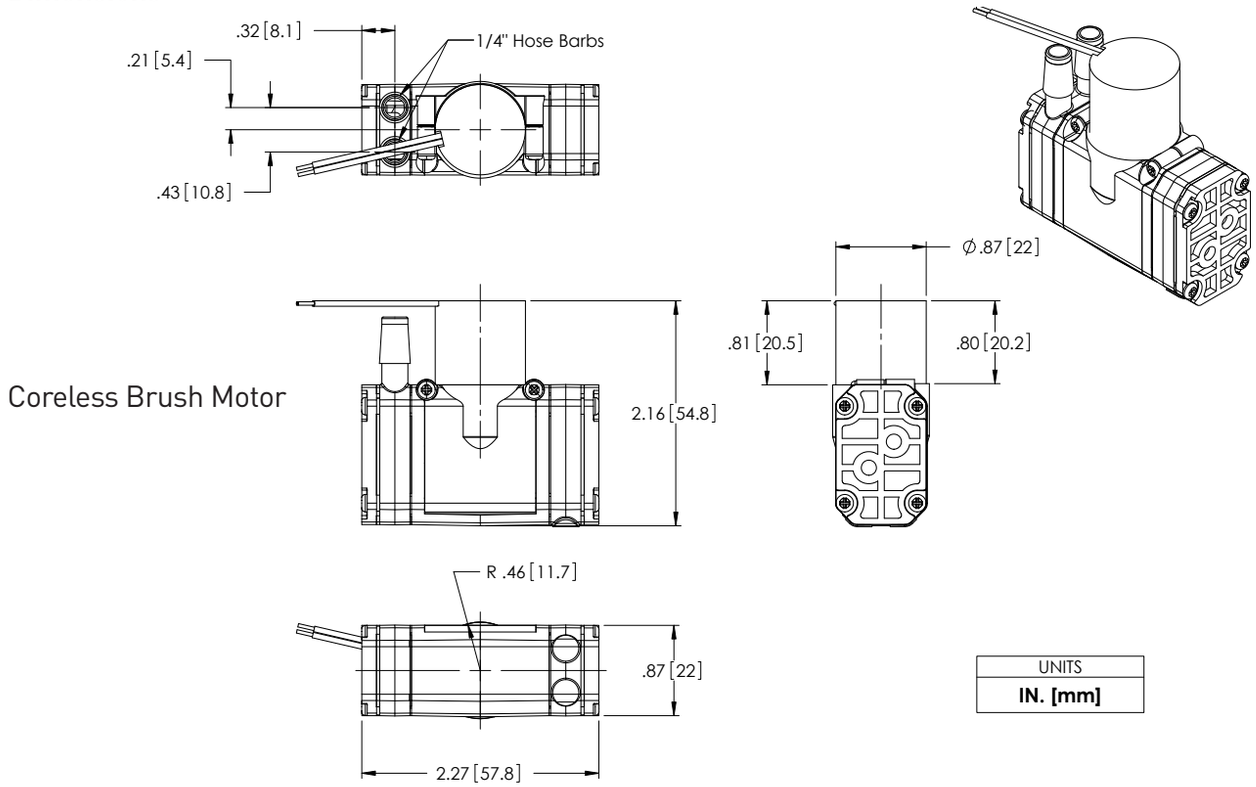
- Barbs are sized for 1/4" ID tubing, 70-80 durometer recommended

T2-04 Micro Diaphragm Pumps (air/gas)

Mechanical Integration

Dimensions

Coreless Brush Motor



Electrical Integration and Motor Control

If application requires variable flow, motor control options are available, as follows:

Brush Motor

2 Wire	Red (+), Black (-)
Wire specification	28 AWG 5" (127 mm) Wire Leads

Key Things to Remember

5" (127mm) flying Leads are the standard electrical connection method to the pump. Contact Applications for other connection requirements.

The pump lead wires are non-polarized.

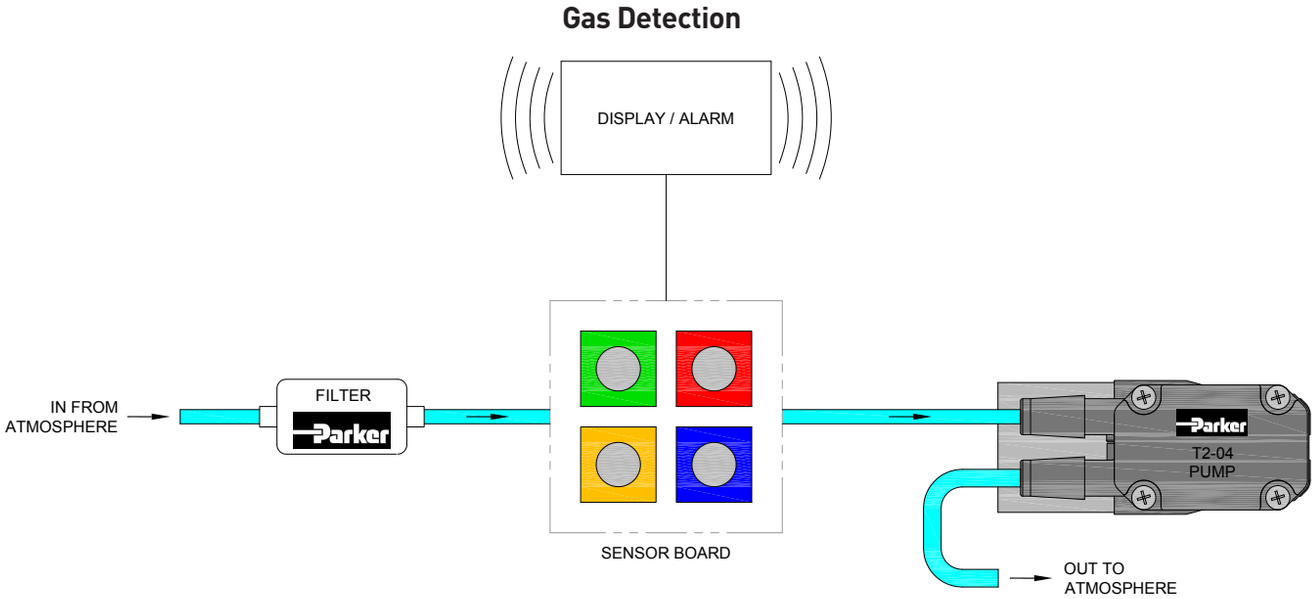
The pump can be controlled by DC voltage or PWM through a control board supplied by the customer. The minimum recommended PWM frequency is 20kHz.

The pump flow and pressure can be controlled by adjusting the input voltage.

The pump is not a pressure holding device. An external check valve is recommended, if there is a pressure holding requirement.

Pump orientation does not affect performance or life.

Typical Flow Diagram



Chemical Compatibility Chart*

	Chemical Compatibility of Wetted Path Materials		
Chemical	Neoprene Rubber(CR)	PPA	Silicone
Air	1	1	1
Ozone (1000 ppm)	3	1	1
Oxygen	1	1	2
Ethylene (Ethene)	1	1	4
Acetylene	2	1	3
Propane	1	1	4
Methane	2	1	4
Nitrogen	1	1	1
Carbon Dioxide	1	1	2
Halothane (Up to 5%)	4	1	4

*The above is an Abbreviated Chemical Compatibility Chart. Please consult factory for details.

Compatibility Legend

1. EXCELLENT
   Minimal or no effect
2. GOOD
   Possible swelling and/or loss of physical properties
3. DOUBTFUL
   Moderate or severe swelling and loss of physical properties
4. NOT RECOMMENDED
   Severe effect and should not be considered

Note: Consult factory for other gases.

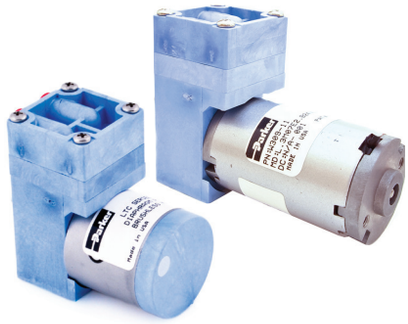
Notes

LTC Series **Miniature Diaphragm Pumps (liquid)**

Up to 650 mLPM Free Flow



LTC Miniature Diaphragm Pumps are offered in both brush and brushless DC motor drives that can be configured for your specific performance requirements and handle a wide range of liquid media over a wide range of pressures. LTC's patented Fluid-Blok™ Advanced Sealing Technology provides redundant sealing capabilities to eliminate potential leaks. Monolithic diaphragm design enables maximum suction, priming, and continuous dry operation. Ideal for waste, transfer and bulk movement of liquids.

Typical Markets

- Clinical Diagnostics
- Analytical Chemistry
- Printing

Typical Applications

- Clinical Chemistry
- Wash and Waste Circuits
- Urinalysis
- Liquid Chromatography
- Large Format Printers
- Photo Processing Printers

Features

- LTC Series Pumps set the highest benchmark for service free life-expectancy with our advanced proprietary diaphragm elastomer.
- Port design allows for top or bottom face seal and is molded for 1/4-28 UNF threaded fittings.
- Overmolded diaphragm eliminates metal components in the wetted path resulting in a design that is inert to variety of media.
- Incorporating the lightweight EZ Mount Accessory facilitates simple system assembly while dampening vibration and reducing noise levels.
- Our 100% oil and grease-free pump and compressor design maintains the purity of your system and are commonly used in FDA-approved systems.
- RoHS Compliant

Product Specifications*

Physical Properties

Operating Environment[1]:

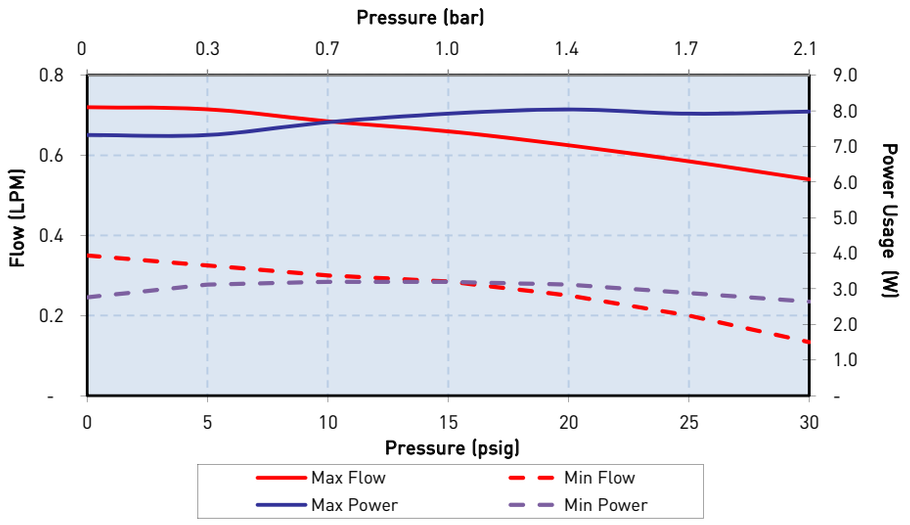
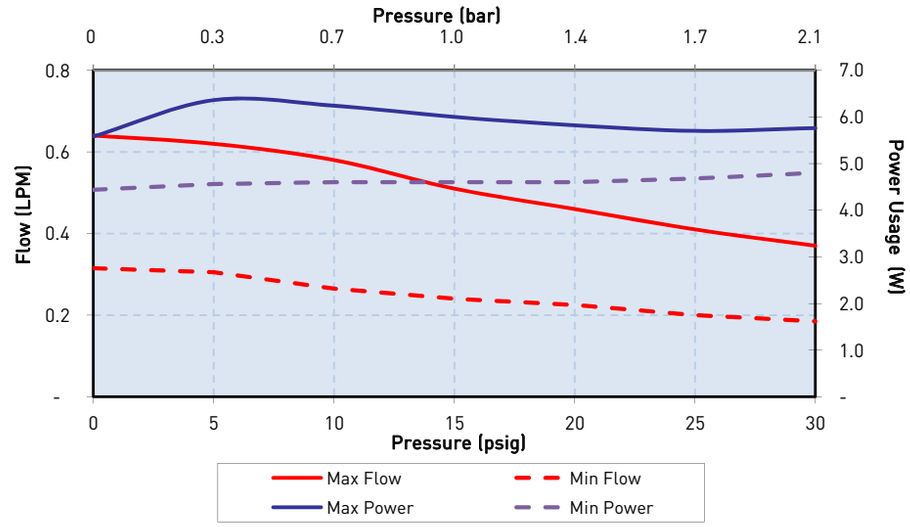
* See Appendix A for details.

Performance Specifications

LTC - PMDC Iron Core Brush Motor



LTC - Brushless Slotted Motor



The above graph represents an example of performance for the pumps series handling water at 800 feet (244m) above sea level at 75°F (24°C). Performance will vary depending on barometric pressure and media temperature. Curves are representative of standard pump configurations. Pump configurations could be customized for higher or lower flows, depending on specific customer requirements.

Please contact Parker Precision Fluidics Applications Engineering for other considerations.

LTC Series

Miniature Diaphragm Pumps (liquid)

Sizing and Selection

LTC Series	PMDC Iron Core Brush	Brushless Slotted Motor
		
	PMDC Iron Core Brush	**BLDC Slotted Motor**
Efficiency[1]	Good	Better
Life[2]	Good - 3,000 hrs	Best - 10,000 hrs
Cost	Best	Better

Mounting Guidelines:

- Bracket options available for mounting consideration (*See EZ Mount catalog pages).*
- Hole in the center of the bottom of housing is for manufacturing only–not to be used for mounting.
- Mounting holes are drilled for #6-20 self-tapping screws with 1/4" (6 mm) thread engagement torque to 4 in-lbs (0.45 N-m).

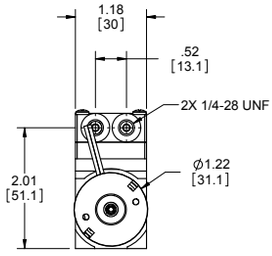
Port Connections:

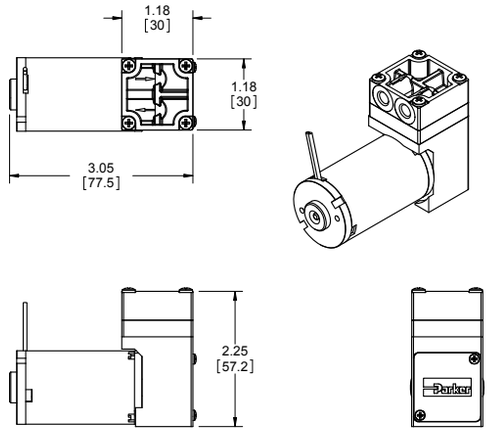
- Flow direction is marked on the pump head with arrows.
- Ports are sized for 1/4"-28 UNF male fittings.

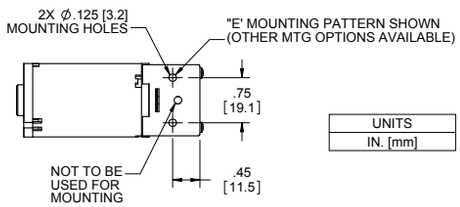
Mechanical Integration

Dimensions

PMDC Iron Core Brush



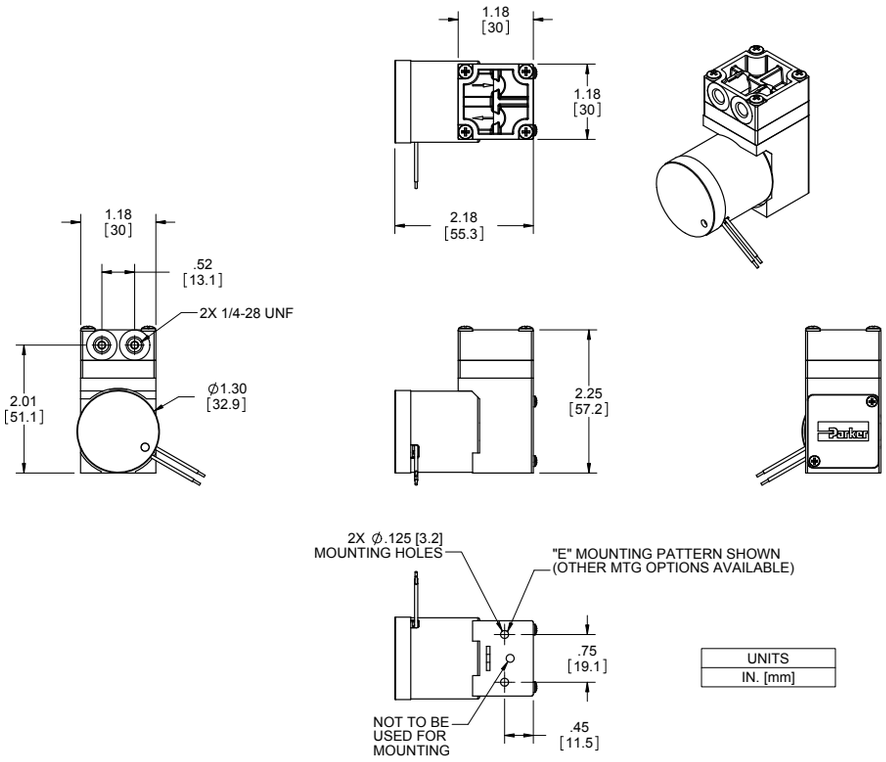




Mechanical Integration

Dimensions

Brushless Slotted Motor



Electrical Integration and Motor Control

PMDC Iron Core Brush Motor

2 Wire	Red (+), Black (-)
Wire specification	22AWG, Insulation OD 0.051 in (1.30 mm) 10" (254 mm) Wire Leads

Brushless Slotted Motor Control Options

2 Wire	Red (+), Black (-)
Wire specification	22AWG, Insulation OD 0.051 in (1.30 mm) 20" (508 mm) Wire Leads

Other Motor Control Considerations

The drive electronics for the BLDC motors are integrated into the motor itself, all that is needed is a power supply with the sufficient voltage and current.

Key Things to Remember

The pump is not a pressure holding device. An external check valve is recommended, if there is a pressure holding requirement.

Pump orientation does not affect performance or life.

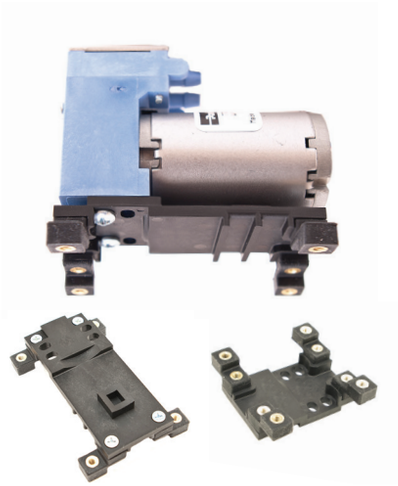
Accessory Information

EZ Mount available



EZ Mount provides ease of installation and effective control of vibration transfer. EZ Mount was designed to mount easily to the Precision Fluidic LTC Family of diaphragm pumps.

Features

- Isolation feet on the EZ mount can be rotated in any one of three ninety-degree planes and is designed for top-down or bottom-up mounting providing simple installation.
- EZ Mount was designed to minimize weight added to the pump assembly. Approximate weights are: Style A - 0.63 oz (18 g), Style B - 0.71 oz (20 g).
- Effectively absorbs vibration to minimize most vibration-induced noise and vibration transfer into an instrument.
- Designed to keep height and size to a minimum.
- Engineered for Parker LTC pumps to ease integration into your system.

Physical Properties

Operating Environment:
41 - 158°F (5 - 70°C)
Humidity:
0 - 95% Relative Humidity
Base Plate:
Noryl GTX830
Feet:

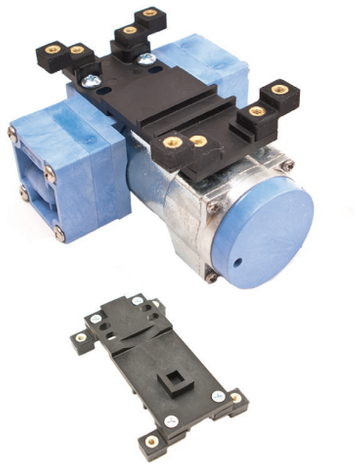
Accessory Information

EZ Mount available



EZ Mount provides ease of installation and effective control of vibration transfer. EZ Mount was designed to mount easily to the Precision Fluidic LTC-IIS Family of diaphragm pumps.

Features

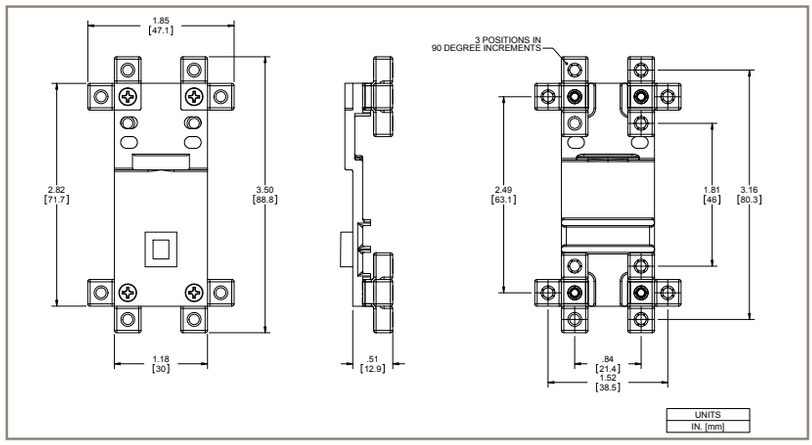
- Isolation feet on the EZ mount can be rotated in any one of three ninety-degree planes and is designed for top-down or bottom-up mounting providing simple installation.
- EZ Mount was designed to minimize weight added to the pump assembly. Approximate weights is: Style B - 0.71 oz (20 g).
- Effectively absorbs vibration to minimize most vibration-induced noise and vibration transfer into an instrument.
- Designed to keep height and size to a minimum.
- Engineered for Parker LTC-IIS pumps to ease integration into your system.

Physical Properties

Operating Environment:
41 - 158°F (5 - 70°C)
Humidity:
0 - 95% Relative Humidity
Base Plate:
Noryl GTX830
Feet:
Silicone
Feet Insert:
Brass
Hardware:
Zinc-Plated Steel

Dimensions

Style B - Brushless Slotted (High Torque) Motor



EZ Mount kits include all necessary hardware and detailed instructions.

Isolation Feet are available in either threaded or thru-hole clearance for standard #4-40 or #6-32 (M3 for clearance hole only) hardware and can be mounted in any of three ninety-degree planes.

LTC-IIS Series Miniature Diaphragm Pumps (air/gas)

Chemical Compatibility Chart*

	Chemical Compatibility of Wetted Path Materials Temperature Range 5-50 Degreees C				
Chemical	FKM	EPDM	AEPDM	PTFE	Vectra A130
Distilled Water	1	1	1	1	1
Methanol	4	2	2	1	1
Isopropanol	1	1	1	1	1
Ethanol	3	2	2	1	1
Acetonitrile	4	4	4	1	1
Organic Acids - Dilute	1	1	1	1	3
Non-Organic Acids - Dilute	1	1	1	1	3
Bases - Dilute	1	1	1	1	3
Saline	1	1	1	1	1
Bleach 12%	1	1	1	1	3
Ink (MEK)	1			1	1
Sodium Hydroxide 20%	2	2	2	1	3

*The above is an Abbreviated Chemical Compatibility Chart. Please consult factory for details. Temperature range for chart is 5-50° C. See Application Engineering for compatibility's with any specific acids or bases.

Compatibility Legend

1. EXCELLENT
   Minimal or no effect
2. GOOD
   Possible swelling and/or loss of physical properties
3. DOUBTFUL
   Moderate or severe swelling and loss of physical properties
4. NOT RECOMMENDED
   Severe effect and should not be considered

Note: Consult factory for other gases.

Ordering Information

Please click on the Order On-line button below (or go to www.parker.com/precisionfluidics/ltciis) to configure the LTC-IIS miniature liquid diaphragm pump for your application.

Serviceable – PPF products are designed for use through the rated life and Parker does not sell replacement parts, nor is it recommended to service these in the field

Note: In addition to Parker's innovative and flexible pump designs, we offer applications engineering expertise to our customers in order to configure and recommend the optimal pump for the application. Contact Parker Applications Engineering to discuss and configure alternate pump configurations to meet your specific application requirements. Providing information on the following requirements will assist us in developing an optimal solution for your application:

- Noise
- Operating Pressure / Vacuum
- Power Consumption
- Life Requirement
- Description of pump function in the application
- Size
- Motor Control
- Media
- Voltage

Appendix A

All performance data is typical based on standard conditions: 70°F and 14.7 psia (21°C and 1 bar).

1. Duty Dependent. For operation above 122°F (50°C) consult factory
2. Life rating can vary depending on application and operating conditions.
3. Custom motor options available. Custom motors may require a significant application potential. The standard motors can be configured with a special winding to meet a particular operation point at a specified voltage
4. Current range is dependent on motor type, voltage, pressure/vacuum and flow requirement. Lower levels possible depending on application.
5. Pump efficiency is a measure of the flow rate generated per unit of power consumed. Efficiency may change dependent on application and operating condition at free flow.

Notes

T2-01

Up to 66 LPM Free Flow

High Flow Diaphragm Pumps (air/gas)

Parker's T2-01 series are high performance and high efficiency diaphragm pumps. Compact and lightweight package configurations make the T2-01 series the technology of choice for fixed and portable high-capacity air and gas applications.

Typical Markets

- Respiratory
- Agent Detection
- Clinical Diagnostics

Typical Applications

- Portable Aspirators
- Wash and Waste Circuits
- Transport Ventilators
- Medical Instruments
- Air-over-liquid or Vacuum Pressure Supply
- Industrial Agent Detection

Features

- Parker's patented highly efficiency dynamic valve design provides high capacity in a compact package
- Pumps provide up to 32LPM in a single head version and 66 LPM in a dual head version
- Provides the highest flow rates available with lowest power consumption.
- The most compact and lightweight package within its performance range.
- RoHS Compliant

Product Specifications*

Physical Properties

Operating Environment[1]:
32 to 122°F (0 to 50°C)

Storage Environment:
14 to 122°F (-10 to 50°C)

Media:
Air, Argon, Helium, Nitrogen, Oxygen, and other non-reacting gases

Humidity:
5-95% Relative Humidity

Noise Level[2]:
As low as 50dB

Pump Assembly Rated Life[3]:
PMDC Iron Core Brush - Up to 2,400 hrs
Brushless- Minimum 3,500 hrs

Weight:
53 oz. (1502 g) - Single Head with PMDC Iron Core Brush Motor
61 oz. (1729 g) - Twin Head with PMDC Iron Core Brush Motor
49 oz. (1381 g) - Twin Head with Brushless Motor

Electrical

Motor Type:
PMDC Iron Core Brush, Brushless

Nominal Motor Voltages[4]:
12, 24 VDC

Max Power at Nominal Voltage:
39 Watts - Single Head PMDC Iron Core Brush
69 Watts - Twin Head PMDC Iron Core Brush
72 Watts - Twin Head Brushless

Electrical Termination:
2-wire (analog or PWM) - PMDC Iron Core Brush
Multi-wire 24V Power, 0-5V Speed Control - Twin Head Brushless

Current Range[5]:
1.0 - 5.7 A

Inductance[6]:
PMDC Iron Core Brush Motor:
12 VDC:
0.50 mH max @ 1kHz/50mV
24 VDC:
2.0 mH max @ 1kHz/50mV
Brushless Motor:
24 VDC:
0.73 mH max @ 1kHz/50mV

Pneumatic

Head Configuration:
Single, Twin

Maximum Flow:
32 LPM - Single Head
66 LPM - Twin Head

Maximum Intermittent Pressure[6]:
22 psi (1517 mbar)

Maximum Continuous Pressure:
8 psi (552 mbar)

Maximum Intermittent Vacuum[6]:
24 in Hg (610 mm Hg)

Maximum Continuous Vacuum:
12 in Hg (310 mm Hg)

Filtration:
40 micron - recommended

Efficiency at Free Flow[7]
Single Head PMDC Iron Core Brush Motor: 3.6 LPM/Watt (*P/N: T1-1HD-12-1NEA*)
Twin Head PMDC Iron Core Brush Motor: 3.6 LPM/Watt (*P/N: T1-2HD-12-1NEA*)
Twin Head Brushless Motor: 4.4 LPM/Watt (*P/N: T1-2BL-24-1NEA*)

Wetted Materials

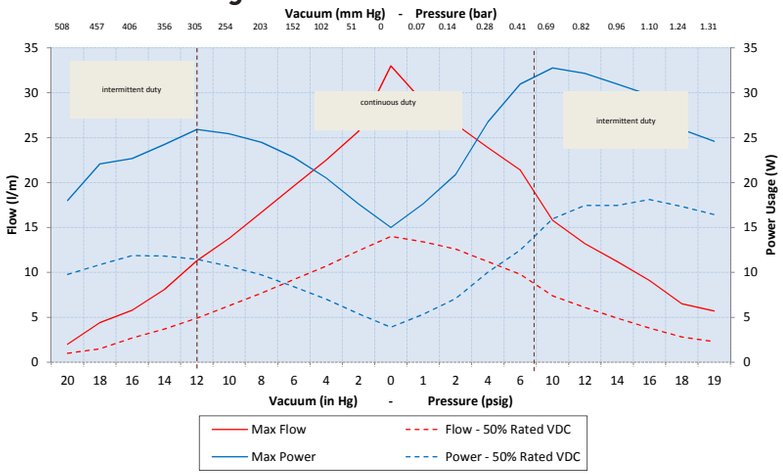
Diaphragm: EPDM | **Valves & Gasket:** Neoprene | **Head:** PPS, PTFE

* See Appendix A for details.

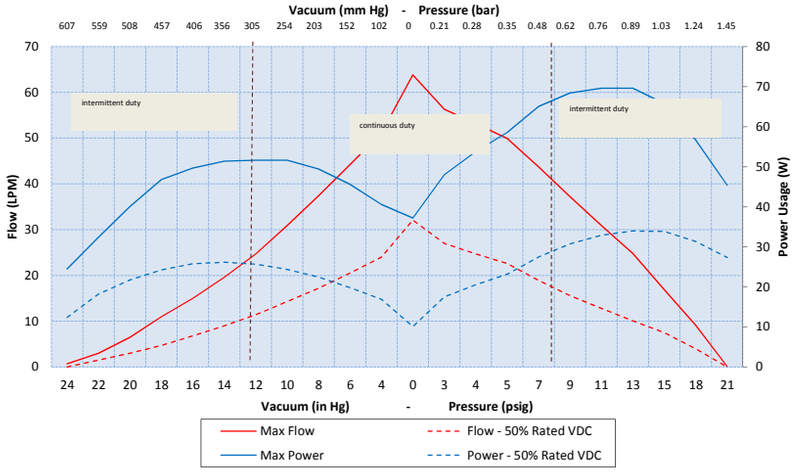
T2-01 High Flow Diaphragm Pumps (air/gas)

Typical Flow Curves

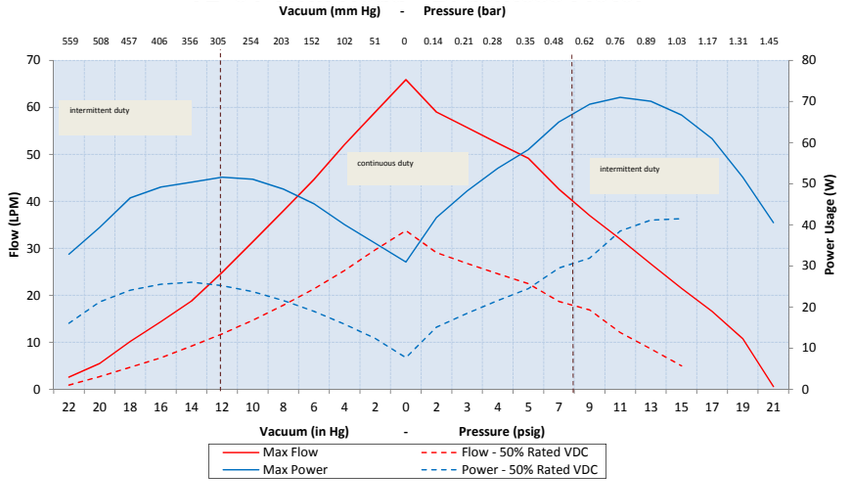
T2-01 Single Head - PMDC Iron Core Motor



T2-01 Twin Head - PMDC Iron Core Motor



T2-01 Twin Head - Brushless Motor



The above graphs represent examples of performance for the pumps series handling air at 800 feet (244M) above sea level at 75° F (24° C). Performance will vary depending on barometric pressure and media temperature. Curves are representative of standard pump configurations. Pump configurations could be customized for higher or lower flows, depending on specific customer requirements.

Please contact Parker Precision Fluidics Applications Engineering for other considerations

T2-01 High Flow Diaphragm Pumps (air/gas)

Sizing and Selection

T2-01 Series	PMDC Iron Core Brush Motor (Twin Head)	Brushless Motor (Twin Head)
		
	Twin Head	**Twin Head**
Efficiency[8]	Better	Best
Life[3]	Better - up to 2400 hrs	Best - Minimum 3,500 hrs
Size/Weight	Good	Better
Cost	Better	Good

Mounting Guidelines:

- Pump can be mounted using #8-32 screws and nuts on the pump body mounting ears.

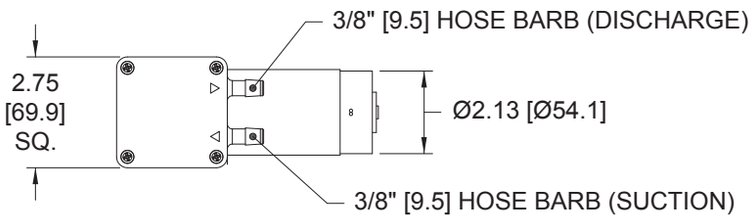
Port Connections:

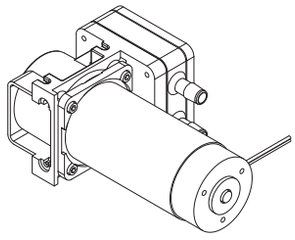
- Barbs are sized for 3/8" ID tubing, 70-80 durometer recommended.
- Flow direction is marked on the pump head with arrows.

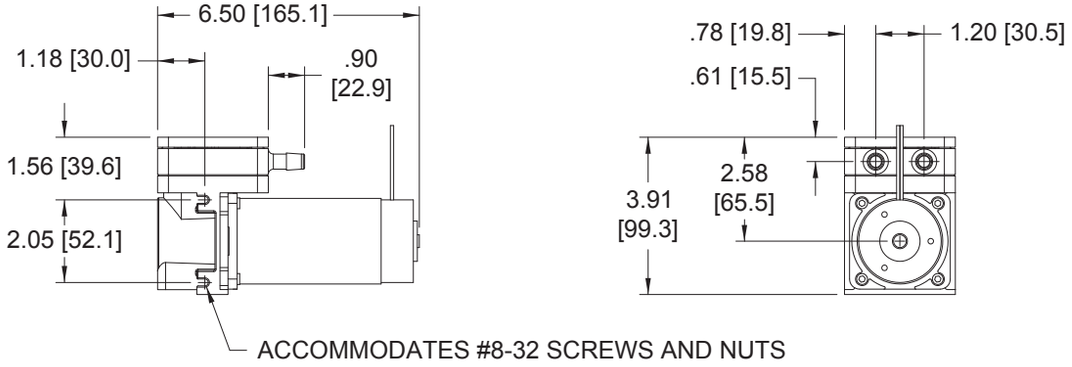
Mechanical Integration

Dimensions

PMDC Iron Core Brush Motor (Single Head)



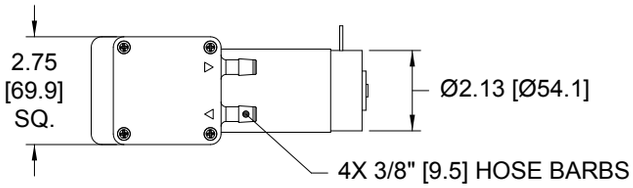


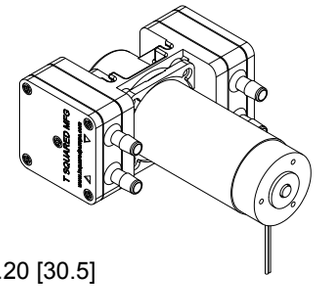


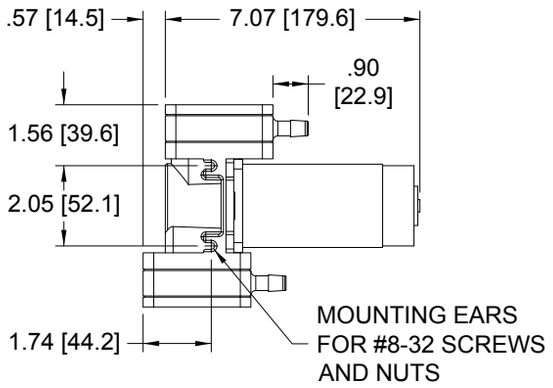
UNITS
IN. [mm.]

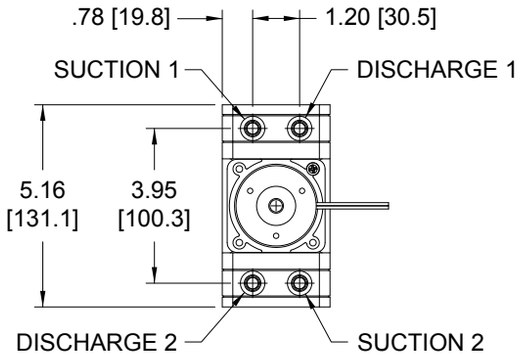
T2-01 High Flow Diaphragm Pumps (air/gas)

PMDC Iron Core Brush Motor (Twin Head)



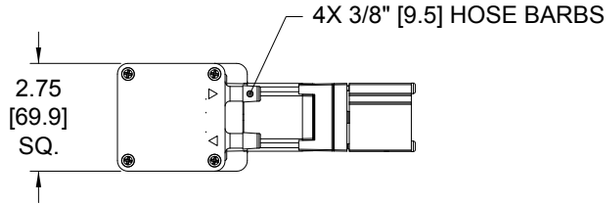


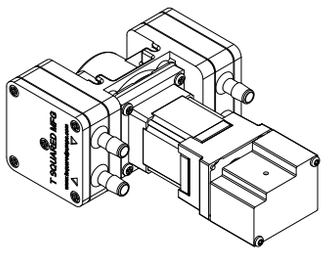


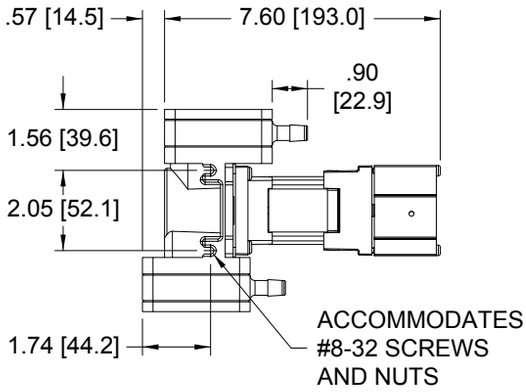


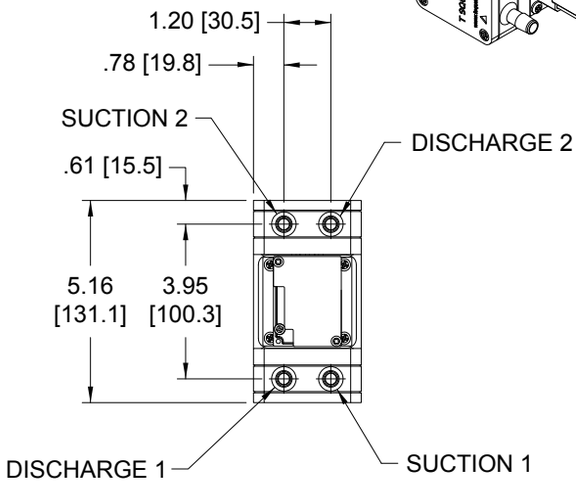
UNITS
IN. [mm.]

Brushless Motor (Twin Head)









UNITS
IN. [mm.]

Electrical Integration and Motor Control

If application requires variable flow, motor control options are available, as follows:

PMDC Iron Core Brush Motor

2 Wire	Red (+), Black (-)
Wire specification	20 AWG Wire lead length 18" ± 0.5" (457 mm ± 13 mm)

Brushless Motor

Mutli Wire Connector	24V Power, 0-5V Speed Control
Wire specification	22 AWG Wire lead length 24" ± 0.5" (610 mm + 13 mm)

Key Things to Remember

Flying Leads are the standard electrical connection method to the pump. Contact Applications for other connection requirements.

The pump lead wires are non-polarized.

The pump can be controlled by DC voltage or PWM through a control board supplied by the customer. The minimum recommended PWM frequency is 20kHz.

The pump flow and pressure can be controlled by adjusting the input voltage. (See typical flow curve for reference).

The pump is not a pressure holding device. An external check valve is recommended, if there is a pressure holding requirement.

Pump orientation does not affect performance or life.

Brushless Motor Control Connector Pin Function

Pin	Description
1	24V Power Input
2	24V Power Return
1	Tachometer
2	0-5VDC Motor Control Input
3	PWM
4	Encoder "B"
5	Encoder "A"
6	Direction Indicator
7	Direction (Fwd/Rev)
8	Enable
9	0-5VDC Motor Control Output
10	+5Volt Out

Typical Flow Diagram

Industrial Gas Detection

*PCD: Peak Current Draw

Please click on the Order On-line button below (or go to www.parker.com/precisionfluidics/t1) to configure the T2-01 high flow diaphragm pump for your application.

Serviceable – PPF products are designed for use through the rated life and Parker does not sell replacement parts, nor is it recommended to service these in the field

Note: In addition to Parker's innovative and flexible pump designs, we offer applications engineering expertise to our customers in order to configure and recommend the optimal pump for the application. Contact Parker Applications Engineering to discuss and configure alternate pump configurations to meet your specific application requirements. Providing information on the following requirements will assist us in developing an optimal solution for your application:

- Noise
- Operating Pressure / Vacuum
- Power Consumption
- Life Requirement
- Description of pump function in the application
- Size
- Motor Control
- Media
- Voltage

Appendix A

All performance data is typical based on standard conditions: 70°F and 14.7 psia (21°C and 1 bar).

1. Duty Dependent. For operation above 122°F (50°C) consult factory
2. Noise is dependent on the configuration and operation of the pump in the application. Parker has the ability to tailor the pump configuration when noise is a critical criterion in the effort to meet the performance requirements of the application. Noise level is tested to Parker protocol P-105.
3. Life rating can vary depending on application and operating conditions.
4. Custom motor options available. Custom motors may require a significant application potential. The standard motors can be configured with a special winding to meet a particular operation point at a specified voltage
5. Current range is dependent on motor type, voltage, pressure/vacuum and flow requirement. Lower levels possible depending on application.
6. Inductance can be used to measure the viability of a component in a device requiring intrinsic safety. Inductance values are for motor winding only.
7. Maximum intermittent pressure/vacuum data is a pump capability guideline for applications that go beyond the maximum continuous levels for short periods of time. Please consult customer specific requirements with the factory or Applications Engineering.
8. Pump efficiency is a measure of the flow rate generated per unit of power consumed. Efficiency may change dependent on application and operating condition at free flow.

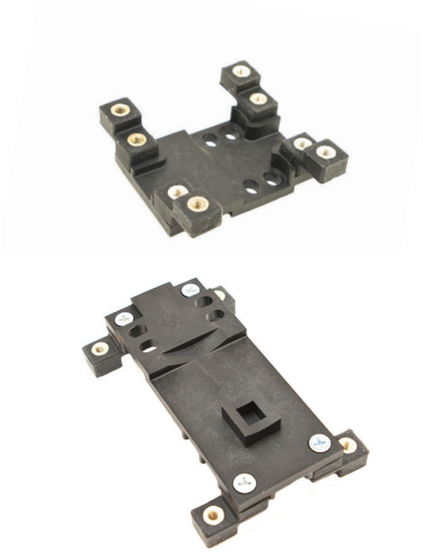
EZ-Mount

Vibration Isolation Mounting System

For BTC/TTC/LTC Series Pumps



*Pictured **EZ Mounts** shown fully assembled with baseplate and isolation feet.*

EZ Mount provides ease of installation and effective control of vibration transfer. EZ Mount was designed to mount easily to all Precision Fluidic BTC, TTC and LTC Family of diaphragm pumps.

Features

- Isolation feet on the EZ mount can be rotated in any one of three ninety-degree planes and is designed for top-down or bottom-up mounting providing simple installation.
- EZ Mount was designed to minimize weight added to the pump assembly. Approximate weights are: Style A - 0.63 oz (18 g), Style B - 0.71 oz (20 g).
- Effectively absorbs vibration to minimize most vibration-induced noise and vibration transfer into an instrument.
- Designed to keep height and size to a minimum.
- Engineered for Parker BTC, TTC and LTC pumps to ease integration into your system.

Physical Properties
